REPORT
2023**

Pízeňský Prazdroj

To the future!
2030

Our Sustainability Report for this year represents a dialogue between Plzeňský Prazdroj and the world around it. Debates on various topics are inseparable from sitting over a glass of beer. In our case, it's just that these conversations move from the pub to where the ingredients for making beer come from - the countryside. Plzeňský Prazdroj thus symbolically sits at a round table with various ecosystems or elements. These ecosystems also speak to people in everyday life, but people often do not listen to what they have to say. We listen to these warning messages and try to change things for the better.

In the brewing industry, it is absolutely crucial to continuously take care of the quality of beer tapping in pubs. Taking care of the nature that gives us the ingredients for making the beer is equally crucial. Only if we listen to and hear the voices of nature will we be able to enjoy good beer for decades to come. And that is exactly what we have long tried to do at Prazdroj.

To the future!

NATURE SPEAKS TO US ALL THE TIME.
AND WE LISTEN.

LET'S LISTEN TO EACH OTHER MORE

None of us lives on a desert island, isolated from the rest of society. To get along well and move forward, we need to listen to each other. Just like the Plzen townspeople more than 180 years ago, who expressed their dissatisfaction with the quality of the local beer. Then they joined forces to create the world's first lager as we all know it today.

At Prazdroj, we are aware of the importance of perceiving signals from our immediate surroundings, be it our suppliers, customers or the surrounding landscape, struggling with the effects of climate change. We therefore establish partnerships that are built on mutual respect. They are exactly what help us cope with the challenges we face together.

We are aware that if we want to be a successful company, we have to make the wider ecosystem we are part of prosper too. Last year, we again made significant progress in a number of areas and opened up some completely new topics.

We focused on malting barley more than before. Our barley is grown in Czech, Moravian and Slovak fields. We buy all of our barley locally, building on long-term partnerships with nearly two hundred growers. That is why we are not happy seeing that the area of malting barley fields in the Czech Republic and Slovakia has declined in the long run. We have identified the cause and launched a major research project looking at how to increase the resilience of malting barley and stabilise its quality through regenerative agriculture practices.

The first results from a similar project in hop fields, where we are one step ahead, have confirmed that regenerative practices can improve soil structure and water retention. In the Žatec region, we let several hop gardens blossom, which helped to bring this topic closer not only to growers but also to the general public. In both

cases, it is a long story. We are therefore delighted to see how many partners have embarked on this journey with us.

Pubs and restaurants are in the middle of a long struggle with high energy prices and a number of other challenges. Last year, as their proud partner, we supported them with an investment of CZK 450 million in the Czech Republic and EUR 7 million in Slovakia. In this area, we understand the taproom issues best, where cooling systems are the biggest energy burden. For the first time ever, we measured the actual consumption of different types of coolers and started looking for ways to reduce energy and water consumption of the taproom by up to a third through its remodelling.

In our breweries, we have reduced the average water consumption to an incredible 2.8 litres per litre of beer brewed. Moreover, our Radegast brewery at Nošovice has maintained a great 2.29 litres of water per litre of beer, which is the best result among all Czech breweries. But the brewery even took this success a step farther. Radegast began looking for ways to keep water in the landscape, and last year alone supported the construction of 29 ponds across the Czech Republic.

We have also achieved great results in reducing our carbon footprint. Since 2019, we have reduced our total emissions from seed to glass by 19%, and almost halved them directly in production. The solar power plants we are building at all our breweries will contribute to further savings. The first of them, in Velké Popovice, was connected to the grid last year.

Moreover, in Slovakia we already have a solution for a full transition to renewable sources of electricity. At the end of the year, we signed a virtual power purchase agreement, the first contract of its kind in the country, thanks to which a new solar park will be built

at Iliašovce covering an area of nearly 9 hectares. This, together with the power plant right on the brewery premises, will cover all its consumption. The land will be used twice, as in addition to the solar panels, it will also serve as sheep pasture.

The brewery in Velký Šariš has also achieved zero dumping, so we are able to reuse all waste from our operations. In the Czech Republic, we have reduced the volume of landfilled waste by a half year-on-year.

We have made significant progress in the area of packaging as well. The Slovak system of deposits for returnable packaging has enabled us to achieve full circularity of our packaging in Slovakia. We have increased our share of returnable packaging to 59%, while in the Czech Republic we maintain an excellent 69%. In Slovakia, we also symbolically closed the can circulation cycle. We now buy back used cans and have them processed into new sheet metal with 75% recycled content. As a result, we have halved their carbon footprint across our entire portfolio. We believe that in the near future we will be able to introduce a similar system in the Czech Republic as well.

The success of deposits for returnable packaging in the Czech Republic is confirmed by our returnable bottles, which we fill 26 times on average and more than 98% of which are returned. That is why last year we launched a first in the Czech Republic, an automatic sorting line for returnable bottles in Plzen, which will help us make the whole process even more efficient.

But we couldn't have done any of this without our people. Prazdroj is full of dedicated employees who realise the size and importance of the story they are part of. And they work hard every day to be able to hand it over in even better shape one day. I am very happy with the extent to which they are satisfied

with their work at Prazdroj. And I am even happier with the fact that they are fairly rewarded for their passion, diligence and commitment. Thanks to this, last year we became just the second company in the Czech Republic to receive the prestigious certificate of equal pay for men and women.

I would also like to mention that we continue to expand our non-alcoholic portfolio. Every eighth beer sold in the Czech Republic last year, and every seventh beer sold in Slovakia, was alcohol-free. We actively promote responsible and moderate alcohol consumption and have initiated several projects in the area of preventing excessive drinking.

All our success is based on dialogue - not only among colleagues within the company, but also in discussions with partners across our value chain. Active listening is the key to understanding what the other party wants to tell you. It is these discussions that shape us and continue to move us forward.

Let's listen to each other even more.

Cheers and here's to the future!

DRAGOS CONSTANTINESCU
CEO

ABOUT THIS REPORT

Transparency is a fundamental principle of our business, which is why we have been openly sharing information about our sustainability activities since 2006, even though we are not yet required by legislation to do so.

The report we submit contains data for the period from 1 January to 31 December 2023 jointly for Plzeňský Prazdroj, a. s., with its registered offices at U Prazdroj 64/7, Východní Předměstí, 301 00 Plzeň, and for Plzeňský Prazdroj Slovensko, a. s., with its registered offices at Pivovarská 9, 082 21 Veľký Šariš. Its content was aligned with the contents of the annual reports of both companies.

Once again, we provide an overview of how we are implementing our To the Future! 2030 sustainability strategy, which covers all important areas of our activities in terms of environmental, social and economic impacts. In this report, we present key performance indicators in these areas and track their evolution over time. We share our experience and success stories and identify areas for improvement. We also want to raise general awareness of sustainable business and new trends. The report also contains selected information regarding our value chain.

In this report, we present key indicators across all ESG pillars. We focus on environmental and social impacts as well as the management of impacts, risks and opportunities for our company. The source of the non-financial data is our internal system for tracking KPIs in all defined business areas according to the key pillars of our sustainability strategy. All data have been

approved by the section directors, who are part of the top management. In our financial reporting, we do not currently separate sustainability costs and investments from current expenditure. For the purposes of this report, we consider the year 2023 to be the medium-term horizon, which is also the timeframe for the commitments in our current sustainability strategy.

Like last year, our report refers to selected indicators of the international Reporting Standards of the Global Reporting Initiative (GRI) without sector standards. They cover topics for which we also published our results in previous years, and we have expanded the level of detail for some of the indicators. By including more detailed information as required by the GRI, we aim for greater transparency and are thus able to compare and evaluate results year on year. Therefore, the data in the annexed section also contain data for the previous periods, in most cases back to 2019, in the same data structure.

Where we have made changes to the reported metrics or methodology from the previous report, these changes are stated and explained directly in the text. The most significant change in the 2023 report is a modification to the previously published information on indirect GHG emissions in our value chain (Scope 3). The reason for these modifications was the change in the carbon footprint calculation methodology, where we newly calculate 100% of malting barley emissions directly from data received from our growers. To consolidate the data according to the new methodology, we have now recalculated the data for

2019-2022 as well. We have now added absolute emissions numbers for each category of our value chain, the specific carbon footprint of our value chain and the breakdown of Scope 3 emissions into categories according to the GHG Protocol.

This report is already partly governed by the new European Sustainability Reporting Standards (ESRS) following the European Corporate Sustainability Reporting Directive (CSRD), the requirements of which will only be binding for us for the 2025 report to be published in 2026. By doing this in advance, we aim at increasing transparency in reporting the results of our activities and at the same time ensuring continuity and a smooth transition to the new standards.

The report includes, for example, a new chapter, Behind the Gates of the Breweries, which describes the structure of our value chain. We have expanded the other chapters with additional details, especially the About Us chapter, where we have newly included the product portfolio and a detailed description of the company's management structure. By disseminating information about our internal policies in all relevant areas, we provide a more detailed overview of Plzeňský Prazdroj's internal processes and values and highlight our efforts to integrate sustainability principles into all areas of our operations.

The report has been independently verified by Forvis Mazars under a limited assurance regime and in accordance with ISAE 3000 standards.

We regularly assess the risks and controls over our sustainability reporting process. The reporting includes risks associated with incomplete or inconsistent information, as well as risks associated with the input data accuracy and human errors in the reporting process due to the data aggregation from multiple systems. We therefore carry out checks to ensure that the information we report is complete and accurate.

The scope of the report and the lack of uniform reporting standards and procedures for some data may cause differences in the interpretation of the information and thus affect its comparability and consistency. For some topics we work with estimates, and the notes for each chapter provide information on the sources of the estimates or the degree of uncertainty in the result.

The current plans, forecasts and strategies presented in this report include forward-looking statements based on assumptions and opinions following from currently available information. Therefore, the achievement of some of the commitments and targets set out in this report is subject to external influences and circumstances that cannot be predicted and over whose development Plzeňský Prazdroj has no control.

We welcome your views and feedback to help us continue in our efforts.

IVAN TUČNÍK

Director for Sustainability and Integrated Projects

I CAME TO THIS WORLD ON OCTOBER 5, 1842.

SINCE THEN, WE HAVE TAKEN CARE OF IT WITH LOVE, PROFESSIONALISM AND RESPONSIBILITY.

PROTECTING IT FOR FUTURE GENERATIONS.

I ABOUT US

TO BE A NATIONAL ICON, THE STRONGEST PLAYER ON THE CZECH BEER MARKET AND PART OF THE COUNTRY'S CULTURAL HERITAGE IS A BINDING COMMITMENT. WE ARE THEREFORE CONSTANTLY STRIVING TO INNOVATE AND MODERNISE OUR PROCESSES AND COMPANY MANAGEMENT SO AS NOT TO JUST REMAIN A FAMOUS BRAND, BUT BE A DYNAMIC COMPANY RELEVANT IN THE 21ST CENTURY. THIS INCLUDES, OF COURSE, CARE OF THE ENVIRONMENT, SUPPORT FOR COMMUNITIES, PROTECTION OF CONSUMERS AND MORE.

DIALOGUE WITH STAKEHOLDERS

ABOUT US

We are a leading beer producer in the Czech Republic and Slovakia, we are among the European leaders in the field and have long maintained our position as the largest exporter of Czech beer. In 2017, we became part of the global [Asahi Group](#). Our beers are brewed in three breweries in Pilsen, including the experimental Proud brewery, and the traditional breweries at Nošovice, Velké Popovice and Velký Šariš in Slovakia.

Our breweries in Plzen, Nošovice and Velký Šariš include malt houses that guarantee the use of top quality ingredients. Our beers are appreciated for their high quality and represent the best of the Czech beer making heritage. This is the reason why we have repeatedly won the title of Most Trusted Brand in the Czech Republic and Slovakia. We are proud that four of our brands carry the Protected Geographical Indication of "České pivo" (Czech Beer). However, it is equally important for us to follow the principles of sustainable management, to protect nature and to make a positive contribution to society as a whole.

BREWERIES AND MALT HOUSES OF PLZEŇSKÝ PRAZDROJ

MODERNISATION IN BREWERIES

Breweries are an important part of the national cultural heritage, which includes a rich history and traditional practices of the brewing craft. However, the preservation of the long tradition and quality of beer would not be possible without modernisation of our breweries. Maintenance and renovation are therefore among our investment priorities.

IN 2023, WE INVESTED ALMOST CZK 2 BILLION IN THE CZECH REPUBLIC AND APPROXIMATELY EUR 8.5 MILLION IN SLOVAKIA IN THE DEVELOPMENT OF OUR BREWERIES.

A major innovation of the past year was the opening of a fully automated warehouse in the Plzen brewery and the commissioning of an automatic sorting line for returnable glass bottles. We are planning to continue with major innovations in 2024, especially to complete the new bottling line in Velké Popovice and to start the second phase of the Plzen warehouse automation.

In Velké Popovice, the brewery park has been revitalized and the old gatehouse has been reconstructed. In Plzen, green areas have been renovated and the Na Spilce pub was reopened after extensive reconstruction. The first restaurant operated directly by Prazdroj offers tank beer and a menu based on quality ingredients from local suppliers.

COMPANY MANAGEMENT AND CONTROL STRUCTURE

Plzeňský Prazdroj does not issue publicly traded shares; it is owned by the Asahi Group Holdings through Asahi Europe & International Limited. Decision-making processes are thus centralised on the level of the executive management and the Board of Directors, under the supervision of the parent company.

The executive management of Plzeňský Prazdroj is the main executive body, managing the day-to-day operations and ensuring that strategic objectives are met. The Board of Directors is primarily responsible for strategic management and business leadership. The Supervisory Board oversees the functioning of the company, monitors the activities of the Board of Directors and ensures that the latter acts in accordance with the law and the internal bylaws of the company. Members of the Board of Directors and 2/3rds of the Supervisory Board members are elected by the General Meeting. The remaining 1/3rd of the Supervisory Board members are elected by the employees.

HOW WE BREW OUR BEERS

WHAT IS NEEDED TO MAKE REAL CZECH LAGER

RESULTS IN 2023

CZECH REPUBLIC

Thanks to the intensive efforts of all employees and partners, Plzeňský Prazdroj has successfully overcome the challenges in 2023 of high inflation and rising energy prices. We managed to slightly increase sales on the domestic market, both in shops and in pubs and restaurants. In 2023, we sold in total 7.36 million hectolitres of beer and cider, which is 1.2% more than in 2022. The brewery's success is mainly due to the sustained support given to pub staff, the care of the beer and its tapping, together with the long-term growth in popularity of lagers and non-alcoholic beers.

Sales of Prazdroj products with on-site consumption increased by 1.1% last year. More than a third of its total production was consumed in pubs and restaurants. Sales of tank beer showed the biggest growth, of 3.5%. Non-alcoholic beverages, specifically tap Birell, were also successful, with 17% growth. Prazdroj sales in shop increased by 1.3%. Last year's results also confirmed the long-term inclination of consumers towards lagers. The entire category of these beers at Prazdroj grew by 3% year-on-year.

7.36
million hectolitres of beer were sold in the Czech Republic

1/3
of the total beer production was enjoyed in Czech pubs and restaurants

1.7
million hectolitres were sold in Slovakia

SLOVAKIA

1.7 million hectolitres of beer were sold in Slovakia, which is 1.3% more than in 2022. The company has also become a leader in the beer market. The success is mainly due to a series of strategic decisions, with the breakthrough point being the achievement of leadership in the packaged beer segment.

The favourable summer and autumn season and the more than 200 successfully implemented events across Slovakia contributed to the positive balance of 2023 in Slovakia. The trend of seasonality, which was particularly evident in tap beer, gained importance and led to a record number of seasonal establishments with which Prazdroj cooperated in 2023. In Slovakia, Prazdroj also focused on quality development and support of the HoReCa segment and launched a programme called Akadémia Prvý pri zdroji [First at Source Academy].

Compared to previous years, tap beers were again successful, but the interest of Slovaks in premium brands and lagers persisted. The Gambrinus brand excelled in the Slovak portfolio with a 16% increase in total volumes, and another significant increase of 7.5% was recorded by Radegast. The new recipe of the award-winning Šariš brand, the best novelty of the year in the Slovak Beer Crown competition, resonated among consumers. Šariš tap beer grew by 3.5%, including outside its home region. Pilsner Urquell also did well, with Slovak consumers enjoying 3% more of it than in the previous year. Birell tap beer saw the same increase.

3.5
percent is the increase for Šariš tap beer

ASAHI TAX CODE

The purpose of Asahi's Tax Code is to ensure proper tax management with regard to tax administration and tax transparency while balancing the interests of various stakeholders.

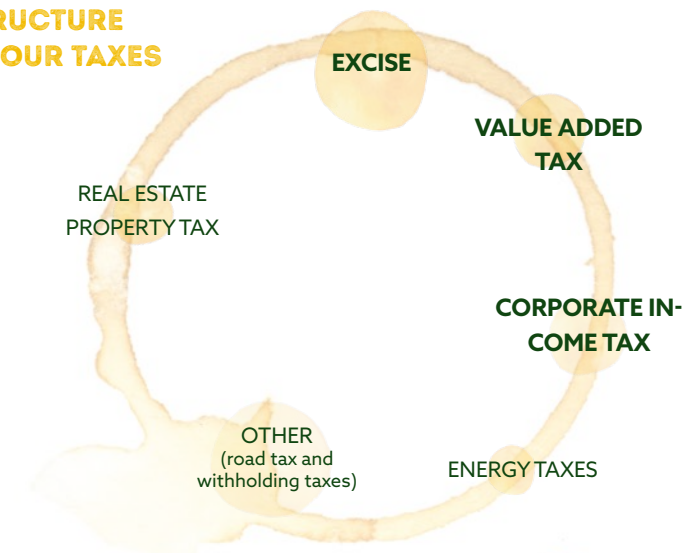

ASAHI GROUP'S TAX CODE OF CONDUCT

PLZEŇSKÝ PRAZDROJ IS A MAJOR TAX PAYER

Plzeňský Prazdroj paid CZK 6.2 billion in taxes in the Czech Republic, of which CZK 2.2 billion was excise.

Plzeňský Prazdroj Slovakia paid EUR 52.7 million in taxes, of which EUR 22.8 million was excise.

ANNUAL REPORT OF PLZEŇSKÝ PRAZDROJ, A. S.

ANNUAL REPORT OF PLZEŇSKÝ PRAZDROJ SLOVENSKO, A. S.

AWARDS

In 2023, Plzeňský Prazdroj succeeded not only brewing, but also in the areas of sustainability, employee care and communication.

We won three gold awards in the TOP Responsible Company for Sustainability competition. In the **Large Company** category, we were awarded for our systematic approach to a sustainable corporate strategy, including a 49% reduction in greenhouse gas emissions (since 2019). We have achieved this by switching to renewable heat sources and other technological innovations such as solar panels and modern bottling lines. The FOR HOPS project brought us the title of **TOP Responsible Company in Innovation** for promoting efficient irrigation of hop fields. The Blossom for Hops project was awarded in the **TOP Responsible Company in the Environment** category for regenerative agricultural practices in hop gardens. Sustainability Report 2022 was awarded second place in the **TOP Responsible Company in the Reporting** category for its detailed documentation of our responsible business efforts.

The FOR HOPS project became the ESG project of the year in the Sustainability Ranking of the Ekonom weekly, awarded in cooperation with the Industry and Transport Confederation of the Czech Republic.

In the Plzen region, we again won the **Sodexo Employer of the Year** competition. We won this prestigious title for the fourth time in a row. The competition is organised by the Employers' Club and judged by PricewaterhouseCoopers on the basis of strict criteria such as remuneration, turnover, training, career development and commitment to sustainability. We also won bronze in the **TOP Employer of the Year** survey in the Consumer Industry category. These achievements reflect our growing popularity among students and graduates, who appreciate our stability, friendly working environment and work-life balance.

Plzeňský Prazdroj won the top award in the Corporate Reputation category at the **World Public Relations & Communication Awards 2023** in Chennai, India, for its communication campaign for the **Smart Taproom** project. A jury of 25 experts from leading PR agencies and academic institutions from all over the world evaluated our communication as the best in a strong international competition. With the same project we succeeded in the **Lemur 2023** competition, which focuses on marketing, PR and communications, where the Smart Taproom concept won first place in the Services category. We also won silver in the Services category with our Pub from Top and from Bottom project and twice bronze for Corporate and Crisis Communication and Sustainability Report.

Smart Taproom also won two bronze awards in the **Zlatý středník** competition and our Sustainability Report took bronze in the **Fenix Content Marketing Awards**.

At the European Beer Star competition, we **won the Future Award** with **Radegast Vigorous 10**, which in addition to the quality of the beer also recognises the brand's activities in the field of sustainability. Radegast was awarded it mainly for its activities in the area of water retention in the landscape.

We won four prizes in the **Effie Awards** competition. The Gambrinus campaign won the silver award for the **Together and with Perspective** project in the Beverages category and the bronze award for Long-term Brand Building. Our campaign for the **Smart Taproom** project was also awarded two silvers in the PR and Small Budget categories.

Our commercial brewers are involved in not only care of tapsters and their skills but also overall "beer" education of the public. They use social media to spread everything our consumers need to know about well tapped beer. Their efforts pay back, as is evidenced by the increased quality of service in restaurants, the growing media interest in presentations on the theme of quality of beer tapping, and the professional awards they receive. The Brewers in Action account won 3rd place in the Social Media - Instagram category at the 10th annual Fenix Content Marketing Awards and the same place in the IMC Czech Awards.

COMPANY ETHICS

We support the principles of responsible marketing of alcohol products and thus follow our own binding principles of self-regulation defined in our Code of Commercial Communication. We believe that our company's reputation is a decisive factor in its success. In order to maintain our reputation, we have established a Business Ethics Policy that is binding not only for all employees, but also for support staff, contractors, suppliers and consultants.

ALL THESE DOCUMENTS ARE PUBLISHED AND ACCESSIBLE ON THE COMPANY WEBSITE.

RESPONSIBILITY AND SUPPLIERS

We pay great attention to the selection of reliable suppliers. We use Supplier Risk Assessment accreditation, which includes ESG criteria. The accreditation is valid for two years. During that period our suppliers are bound to abide by the Asahi Business Ethics Policy for Suppliers and the Asahi Anti-Corruption Guidelines for Suppliers.

FOCUS ON QUALITY

RISK MANAGEMENT AND ASSESSMENT

The overall objectives of the company are defined in the Integrated Corporate Policy (IMS Policy). It is directly related to the integrated management system including the principles of the following systems: quality management system - ISO 9001, environmental management system - ISO 14001, food safety management system - ISO 22000, GMP+, occupational health and safety system - ISO 45001 and energy management system - ISO 50001, for which a new certificate was issued in 2023 for the period 2023-2026.

The area of environmental and safety systems management is in accordance with ISO standards and falls under the system management of the Chief Brewer of Plzeňský Prazdroj.

THE COMPANY'S INTEGRATED MANAGEMENT SYSTEM CONTINUES TO BE VERIFIED BY AN INDEPENDENT INTERNATIONAL AUTHORITY IN ACCORDANCE WITH THE REQUIREMENTS OF INTERNATIONAL ISO STANDARDS.

The company's management system complies with the most stringent European Union standards for food safety (FSMS - HACCP) and pollution prevention (IPPC).

We identify binding requirements in the area of environmental and safety systems for each stakeholder. Procedures to identify environmental aspects of products, as well as processes and activities, are recorded in the Risk and Opportunity Register. This provides an overview of which risks need to be addressed as a priority. In the case of the Proud mini brewery, a separate, simplified IMS policy was created due to the nature of its operations.

The IMS policy is communicated to all employees of the company, who communicate it in an appropriate manner to their partners, suppliers, customers and other stakeholders.

The external context allows us to understand stakeholder expectations and requirements. The internal context is focused on achieving the ability to consistently provide products and services that meet customer and legal and regulatory requirements, including other accepted requirements. It also ensures activity and process efficiency.

The company regularly prepares investment plans. Most of its investments go into modernising technology, improving product quality, workplace safety and environmental friendliness.

EACH OF OUR NEW PRODUCTS UNDERGOES A DETAILED DUE DILIGENCE ASSESSMENT BEFORE LAUNCH, WHICH ALSO TAKES INTO ACCOUNT SUSTAINABILITY CRITERIA. THUS, THE ASSESSMENT COVERS NOT ONLY DOMESTIC AND EUROPEAN LEGAL ASPECTS, BUT ALSO ENERGY AND WATER CONSUMPTION, THE AMOUNT OF WASTE PRODUCED AND THE ENVIRONMENTAL IMPACT OF THE PRODUCT.

We strive to increase efficiency, monitor quality, simplify and secure processes in our operations and engage employees and customers. To do all this, we are assisted by the automation and digitalisation projects we have implemented. But digitalization is also useful outside our breweries. In the FOR HOPS project, for example, we are able to help hop growers manage water efficiently and cope with climate change thanks to the use of state-of-the-art technology, sensors and smart meteorological stations. Our online training courses help pub owners to promote their services and attract new guests.

WE ARE IN DIALOGUE WITH ALL OUR STAKEHOLDERS

WE FIRMLY BELIEVE THAT SATISFIED PARTNERS CONTRIBUTE TO COMPANY SUCCESS AND SUSTAINABILITY.

We are therefore in continual dialogue with all stakeholders and strive to ensure that our activities and approach to business lead to their satisfaction and improve their own results.

In the Czech Republic, we are a member of the Czech Association of Breweries and Malthouses, the Food Chamber and the Industry and Transport Confederation. We are also active, for example, in the Advertising Council and the Business for Society association. In Slovakia, we discuss common topics, e.g. in the Slovak Food Chamber, and we are an active member of the Slovak Beer and Malt Producers Association, the Advertising Council and the Business Leaders Forum.

Dialogues with stakeholders allow us to identify topics that have a direct impact on our company and areas that in turn we directly influence. The materiality matrix, in which we have ranked the topics, helps us keep track of the key areas of our sustainability strategy. The matrix was one of the key inputs in the strategy's preparation. In 2020, we therefore significantly strengthened our sustainability ambitions and adopted the For the Future! 2030 strategy to fulfill during this decade.

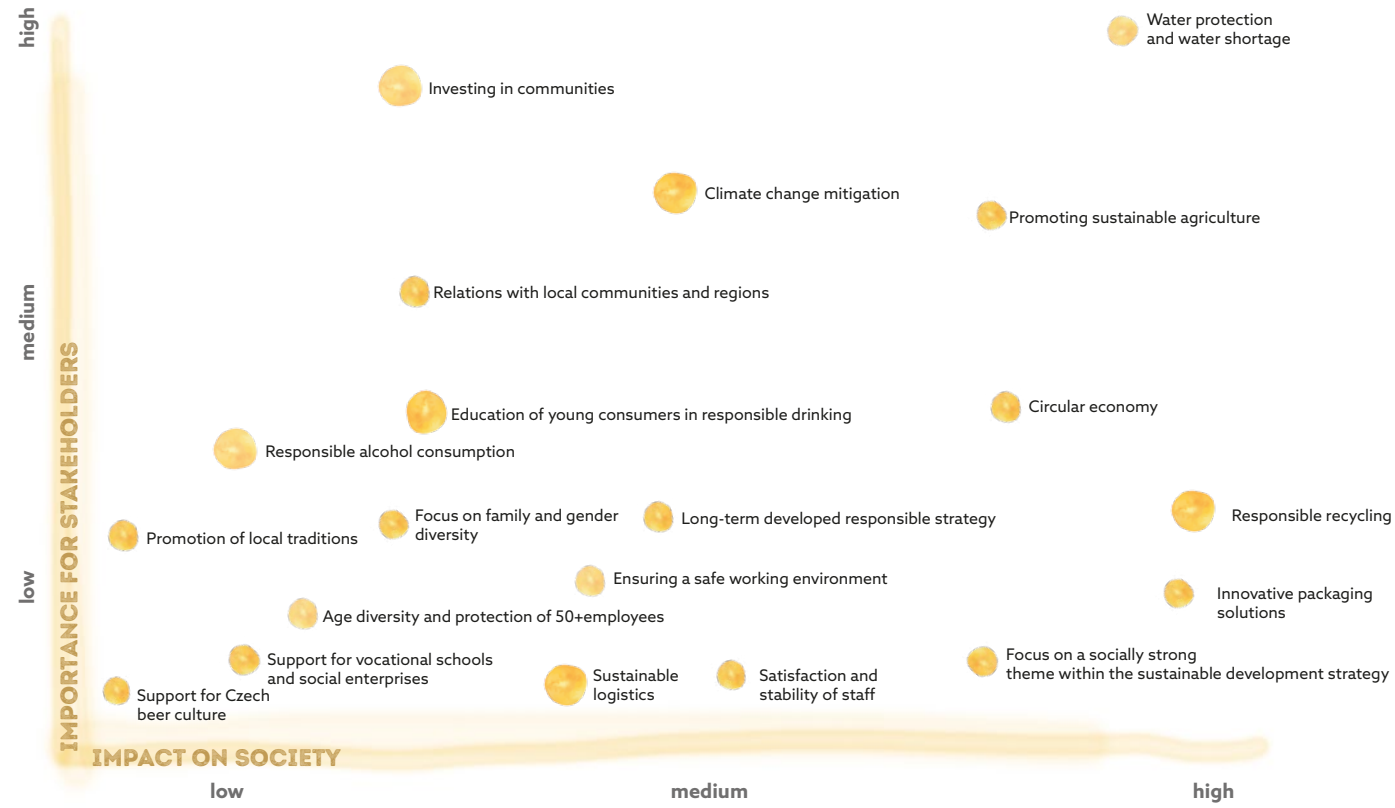

IN 2024, WE ARE PLANNING TO CONDUCT A DOUBLE MATERIALITY ANALYSIS IN ACCORDANCE WITH ESRS EUROPEAN STANDARDS FOR REPORTING SUSTAINABILITY INFORMATION AND IN LINE WITH THE CSRD SUSTAINABILITY REPORTING DIRECTIVE. WE WILL WORK TO IDENTIFY AND EVALUATE KEY FINANCIAL AND NON-FINANCIAL ASPECTS THAT ARE IMPORTANT TO OUR COMPANY AND OUR STAKEHOLDERS.

STAKEHOLDER	DIALOGUE	TOPICS AND CHAPTERS
Employees and Trade Unions	feedback, regular evaluation, education and training, satisfaction survey, internal communication	Strategy, People, Responsibility
Customers and Consumers	surveys, education, awareness in responsible consumption and sustainability	People, Behind the Gates of Breweries, Communities, Responsibility, About Us

MATERIALITY MATRIX OF PLZEŇSKÝ PRAZDROJ

IN 1842, JOSEF GROLL, BAVARIAN BREWER, BREWED THE WORLD'S FIRST BATCH OF BOTTOM-FERMENTED LAGER IN PILSEN. HE USED SOFT PLZEN WATER, LOCAL MALT AND ŽATEC HOPS. HIS RECIPE INSPIRED BREWERIES IN MANY OTHER COUNTRIES AND GAVE BIRTH TO A NEW BEER - PLZEN-TYPE BEER. PLZEN IS ONE OF THE FEW CITIES IN THE WORLD WHOSE NAME HAS ALSO BECOME THE NAME OF A BEER TYPE.

MATERIALITY MATRIX PLZEŇSKÝ PRAZDROJ SLOVAKIA

II STRATEGY

EVERY SIP OF OUR BEER BRINGS WITH IT NOT ONLY A TASTE EXPERIENCE, BUT ALSO A COMMITMENT TO THE PLANET AND SOCIETY. TO PRESERVE THE BREWING TRADITION FOR FUTURE GENERATIONS, WE STRIVE TO THINK LONG-TERM WITH AN EMPHASIS ON SUSTAINABILITY IN ALL AREAS OF OUR OPERATIONS, FROM PRODUCTION VIA DISTRIBUTION TO CONSUMPTION.

STRATEGY PILLARS

With full respect for the gifts of nature, which no great-tasting beer can do without, we emphasize innovation and sustainability in our business and careful observance of our commitments that are firmly linked to the **Asahi Europe & International Group's 2020 Sustainability Strategy**. The strategy, based on the **three ESG** (Environmental, Social, Governance) pillar, is our compass to guide us in matters of environmental protection, social responsibility and good corporate governance.

We are also a member of the global **RE100** initiative focused on renewable energy use and we have committed to achieving the objectives of the **Science Based Targets** standard aimed at preventing the plant warming rate to **exceed 1.5 °C/year**. Our climate aims for 2030 were validated by the Science Based Targets Initiative. We also support the UN Sustainable Development Goals (SDGs) adopted at the September 2015 summit.

Learn more about the Asahi Group's approach to sustainability and environmental principles.

SUSTAINABILITY AT THE ASAHI GROUP

ENVIRONMENTAL PRINCIPLES AND VISION

OUR COMMITMENTS IN THE AREA OF SUSTAINABILITY

2025 → 2030 → 2050

CARBON NEUTRALITY
All electricity for our breweries will come from renewable sources.

WATER
We will reduce the average water consumption required to produce 1 L of beer to 2.75 L.

WASTE
No waste from our breweries will end up in landfill.

CARBON NEUTRALITY
Our breweries will be carbon neutral. We will reduce the carbon footprint of our supply and demand chain by 30%.

WATER
Water for our breweries will only come from sustainable sources.

INGREDIENTS
All agricultural ingredients used to make our beer will come from sustainable sources.

PACKAGING
All of our product packaging will be reusable or recyclable and at least half made from recycled materials. We will end the use of single-use plastics made from virgin material.

DIVERSITY
We will achieve a balanced proportion of men and women in leadership positions.

ACCOUNTABILITY
Soft drinks will account for 25% of our portfolio.

CARBON NEUTRALITY
Our carbon footprint will be zero across the entire supply-and-demand chain.

WHAT HAPPENED IN 2023

THE FOR BARLEY PROJECT HAS ACHIEVED ITS FIRST RESULTS

← Following two years of data collection in the hop fields we have built an extensive database on the needs of plants and the effect of weather on their growth. Thanks to this, we can help growers to cope with the negative effects of climate change. At the end of the year, we completed works on a predictive model that will allow them to forecast hop yield and quality, and now we are developing a mobile app to help them plan irrigation efficiently. Already the pilot project carried out at the Chrášťany hop garden was a success, when a change in irrigation tactics increased yields by up to 40 %.

SMART TAPROOM PROJECT AND MORE EFFICIENT COOLERS

← Restaurants and pubs have long struggled with high energy prices, with the biggest energy burden on tap beer being the cooling systems. Therefore, for the first time in the history of brewing, after having measured the actual consumption of different sizes and types of coolers, we are looking for a way to reduce the energy and water consumption of the taproom through modifications.

FULL PACKAGING CIRCULARITY IN SLOVAKIA

↑ Thanks to the returnable packaging system, we managed to increase the share of recycled aluminium in the body of all new cans in Slovakia to three-quarters last year. Now we are able to transform all collected cans into new ones. This means that we have fully circular packaging 7 years earlier than originally planned. By producing cans from recycled material in a much less energy-intensive way, we have reduced their carbon footprint by 49% and saved 512 tonnes of new aluminium per year.

PHOTOVOLTAICS ON THE WAY TO ZERO EMISSIONS

↑ The deployment of photovoltaics in the manufacturing process is another step towards carbon neutrality. We have therefore launched an extensive programme of installing solar panels on the roofs of the breweries' production buildings. We have launched the first solar power plant in Velká Popovice and other breweries will follow. By using solar energy, we will reduce our CO₂ emissions by nearly 500 tonnes a year.

SAVING MALTING BARLEY

→ We have teamed up with scientists to help save malting barley, the basic ingredient in Czech beer. We have launched the FOR BARLEY research project and started using modern technologies and regenerative farming practices in fields in three locations. The project should help increase the resilience of barley to climate change and stabilise harvests.

WE FIGHT STEREOTYPES CONNECTED WITH NON-ALCOHOLIC BEVERAGE DRINKING

→ The results of our survey show that nearly 50 % of the population have encountered social pressure making them drink. That is why we are actively engaged in combating stereotypical behaviour towards those who prefer non-alcoholic variants of adult beverages. In our new non-alcoholic Birell beer campaign, we stress that fun is not dependent on alcohol consumption and can be enjoyed without it.

BLOSSOM FOR HOPS

← We support our suppliers. We have launched a five-year research project, Blossom for Hops, which is about a regenerative approach to hop growing and is unparalleled in Europe in its scope and focus. Planting flowers and other plants between hop rows helps improve soil fertility and preserve the quality of Czech hops.

ŠARIŠ BREWERY ENDS LANDFILLING

↑ One of our strategic goals is to ensure that by 2025 no waste from breweries ends in landfills, and all waste is reused, recycled or used for energy generation. Thanks to the gradual modernization, the friendly approach of the employees and the well-set system of waste management, the brewery in Velký Šariš already achieved this in 2023.

FAIR REMUNERATION SYSTEM

↑ We are proud holders of the prestigious international Equal Salary certificate, which places us among the top 150 companies in the world in terms of fair remuneration system. Our gender pay gap is less than 5% and we actively promote diversity and opportunities for women in society, including initiatives to help women balance motherhood and career.

THE ONLY GLASS BOTTLE SORTING LINE OF ITS KIND IN THE CZECH REPUBLIC

↑ The first automatic sorting line for returnable glass bottles in the Czech Republic, which simplifies manual work and increases the reliability of bottle sorting, has been launched. The 12-arm robot can sort up to 81,000 bottles per hour, including damaged bottles and crates, contributing to a circular economy and reducing the environmental impact. The investment of nearly CZK 50 million in this technology emphasizes our commitment to sustainable packaging.

MILLION CROWNS TO BUILD PONDS ACROSS THE CZECH REPUBLIC

← At Radegast, we have long been dedicated to reducing water consumption in the Nošovice brewery. The brewery consumes 2.29 L of water for production of one litre of beer, which makes it the absolute top globally in this respect. At the same time, we also support a number of projects contributing to water retention in the countryside. In 2023, we joined forces with the Czech Forest Management and supported construction or restoration of 29 ponds in eight locations, which help retain water in the landscape, with an investment of a million Czech crowns.

← photo: Červenka pond / Forest Management of the Czech Republic

ŠARIŠ BREWERY SWITCHES TO 100% RENEWABLE ENERGY

→ Starting in 2025, the Šariš Brewery plans to make full use of renewable sources, which includes beer production using solar energy. The new solar park in Iľiašovce will cover 92% of the brewery's consumption and thus reduce its carbon footprint by almost a fifth. At the end of the year, the brewery entered into a unique 10-year virtual energy purchase agreement, the first of its kind in Slovakia.

SUSTAINABILITY STRATEGY MANAGEMENT

Sustainability is an integral part of our long-term corporate strategy and a daily reality of our business. We focus on several key areas, including achievement of carbon neutrality, reduction of water consumption, taking care of our ingredients and our suppliers, reuse of packaging, expansion of our non-alcoholic beverage portfolio and promotion of diversity.

We have set specific targets for each of these areas and are constantly monitoring and evaluating their implementation. Achievement of the sustainability strategy key performance indicators is also taken into account in the evaluation by the company's top management and Board of Directors. Directors of different functions are responsible for meeting strategic objectives and each department has a sustainability representative on its team.

The consistency of the strategy is overseen by a Steering Committee comprising members of the company's senior management, which sets targets and monitors their achievement on a quarterly basis. The Steering Committee also discusses and evaluates the Company's register of risks twice a year, including measures to avoid or minimise their potential impact. The risk management process is controlled by the Internal Audit Department.

S-EBITA - FINANCIAL INDICATOR FOR SUSTAINABILITY

S-EBITA, our own financial indicator, works like traditional EBITA, except that it also takes into account the sustainability of our activities. We deduct the costs associated with the environmental impact of our business from our economic earnings. This indicator helps us understand how our earnings could be affected in the future by our obligation to financially offset these impacts. Specifically, we measure CO₂ emissions in Scope 1 and 2, CO₂ emissions in Scope 3 for our packaging and beer cooling in stores, and the amount of plastic from virgin materials used in production. We will be adding more areas in the future. S-EBITA is an important investment planning tool helping us to shorten the payback period for projects with a positive impact on our carbon footprint. As part of strategic decision-making, it is also taken into account in the evaluations by the company's top management and Board of Directors. Achievement of S-EBITA targets accounts for 30% of top management's long-term financial incentives.

STRATEGY IMPLEMENTATION

Last year, we saw a significant shift in our strategic goals for 2030. We are happy to say that we have even met some of them ahead of plan.

In Slovakia, we have achieved zero landfill, and are already able to reuse all the waste from the brewery. We have also enjoyed significant success in the area of recycling, where we have managed to achieve full circularity of packaging at the Šariš brewery 7 years earlier than originally planned. The brewery has also started its transition to renewable energy sources and from 2025 on will only use electricity generated from the sun.

Responsibility for our products does not end at the brewery gates. On our sustainability journey, we also think about the suppliers of our ingredients. Thanks to intensive cooperation with them, we have made significant progress in implementing sustainable agricultural practices in the form of joint research projects aimed at improving soil fertility and conditions for Czech hops and barley growing.

IN THE LONG TERM, WE HAVE BEEN SUCCESSFUL IN MEETING THE PLANNED WATER AND ENERGY CONSUMPTION TARGETS FOR THE ENTIRE GROUP OF BREWERIES AND MALT HOUSES IN THE CZECH REPUBLIC AND SLOVAKIA.

In the area of carbon neutrality, we have invested in modernising our production technologies, installed photovoltaics and optimised our logistics processes. This has helped us reduce our carbon footprint in production by 4.6% year-on-year and achieve better energy efficiency in our breweries.

Our cooperation with communities and customers is equally important for us. All of these achievements move us closer to achieving our ambitious sustainability goals set for the period to 2030.

OUR MISSION

Our mission helps us define our strategic choices and stay on track in business, growth and in building a broader role in society. Our mission, expressed as **Creating relationships that make sense**, is built on what's closest to our industry - connecting people and building community. Together, we can change things for the better in favour of society and the planet.

WE CREATE RELATIONSHIPS THAT MAKE SENSE

WE WANT TO PIONEER POSITIVE IMPACT ON THE PLANET IN EVERYTHING WE DO

We strive for zero negative impact on the environment and actively contribute to healing our planet through our brands, partnerships and initiatives.

WE WANT TO BRING POSITIVE AND INCLUSIVE EXPERIENCES TO PEOPLE AND SOCIETY

We will do what we are best at, which is to bring people together and build their community. We want to promote tolerance and open, inclusive experiences. We will reshape the image of beer and help make moderate alcohol consumption a trend.

In order for these relationships to work well, a solid in-house base is needed. Our teams include specialists who lead us towards continuous improvement and integration of sustainable practices in all of our operations from manufacturing to distribution. This way we motivate our employees to actively engage in and identify with our goal of making a positive impact on the environment and society.

THE TERM STRATEGY, DERIVED FROM THE GREEK STRATEGOS, ORIGINALLY ONLY APPLIED TO THE MILITARY SPHERE. BECAUSE IT DEALS PRIMARILY WITH THE INTERRELATIONSHIP BETWEEN AVAILABLE MEANS AND ENDS, THE TERM NOW HAS A MUCH BROADER MEANING. A SUSTAINABLE BUSINESS CANNOT DO WITHOUT A GOOD STRATEGY, AND EVEN GOOD BEER CANNOT BE BREWED WITHOUT A CLEAR IDEA OF HOW TO TRANSFORM THE INPUT INGREDIENTS INTO THE DESIRED OUTCOME.

WE HAVE BEEN WINNING THESE IMPORTANT BATTLES IN OUR BREWERIES SO FAR.

III

BEHIND THE GATES OF BREWERIES

OUR BREWERIES ARE PLACES WHERE RAW MATERIALS, WATER, ENERGY AND A LOT OF HUMAN SKILL FLOW IN AND ARE TURNED INTO BEER. WE ARE WORKING HARD TO MAKE THIS WHOLE CYCLE RUN WITH AS LITTLE ENVIRONMENTAL IMPACT AS POSSIBLE.

52

VALUE CHAIN

56

OVERVIEW OF PRODUCTION INPUTS

58

OUR SUPPLIERS

59

DISTRIBUTION

60

OUR CUSTOMERS

Our business builds on agricultural ingredients and other inputs that we use to produce first-class beers and other products. In addition to suppliers of barley, hops and other ingredients, our value chain also includes a number of other suppliers, primarily in the Czech Republic and Slovakia.

We distribute most of our products ourselves to retail and food service customers. They then offer them to end consumers. In addition to the Czech Republic and Slovakia, we export our products to 42 countries worldwide.

In terms of our carbon footprint, the most important activities include cultivation and processing of the ingredients, especially malt barley, the actual production in our breweries, packaging materials, logistics and the cooling of our products at our customers.

We have set targets to manage our environmental impact across the value chain and we also look across selected segments for ways to help partners manage the risks associated with the impact of climate change on their business. In particular, we focus on barley growers (FOR BARLEY project), hop growers (FOR HOPS and Blossom for Hops) and customers in food service (Smart Taproom). Details of the individual projects can be found in the [Water](#) and [Raw Materials](#) chapters.

NUMBER OF PUBS AND RESTAURANTS
offering our products
(as of 31 December 2023)

VALUE CHAIN

The overview shows where material impacts or sustainability-related risks occur in our value chain.

In the coming period, we also plan to map other levels of our value chain, including the most important inputs from our suppliers.

OVERVIEW OF THE MOST IMPORTANT INPUTS

BEER INGREDIENTS

Most of the basic ingredients for the production of beer and other products in our portfolio are of agricultural product nature. The most important one is malt barley, but another no less important ingredient for beer production is hops, despite the significantly smaller volumes purchased.

- BARLEY MALT
- HOPS SUGAR
- FRUIT COMPONENTS MAIZE

WATER AND ENERGY

We need energy and water to brew beer, cool it, package it and perform other technological steps in the individual stages of the production process. Roughly a quarter of the total energy consumed is represented by electricity, with the remainder coming from heat sources, which often vary between breweries, with natural gas and biomass predominating.

For details, see the [Water](#) and [Carbon Neutrality](#) chapters.

- WATER ELECTRICITY
- HEAT COLD
- GAS OTHER FUELS

PRODUCTION INPUTS

Other inputs to production include, in particular, silica for filters, cleaning and disinfecting agents and CO₂ used in the packaging of finished products. We produce most of our own technical CO₂ by capturing CO₂ in tanks from fermentation processes.

- DIATOMITE CLEANING AGENTS
- CO₂

LOGISTICS

Our logistic processes cover transportation of raw materials, packaging materials and other inputs into the production and distribution of our products to end customers, including exports to more than 50 countries. Logistic operations include transport as well as the renting and operation of distribution centres in the Czech Republic and Slovakia.

For more information, see the [Carbon Neutrality](#) chapter.

- TRANSPORTATION SERVICES WAREHOUSE RENTALS
- TRUCKS CARS

PACKAGING

Packaging materials for packaging inputs and finished products. These include primary and secondary packaging as well as transport packaging for product transport on pallets to customers.

See the [Packaging](#) chapter for details.

- CANS GLASS BOTTLES BARRELS CRATES
- PALLETS LABELS CROWN CAPS PLASTIC FOILS
- CARDBOARD INK ADHESIVES

SALES SUPPORT

Technological equipment for pubs and restaurants, refrigerators at retail customers and other customer support materials, especially within the food service segment.

Details in the [Communities](#) chapter.

- TAPPING TECHNOLOGY REFRIGERATORS
- PUB EQUIPMENT POS MATERIALS

SERVICES

IT services, marketing, legal, financial, consulting and other business support services.

- MARKETING SERVICES IT
- LEGAL SERVICES CONSULTATION

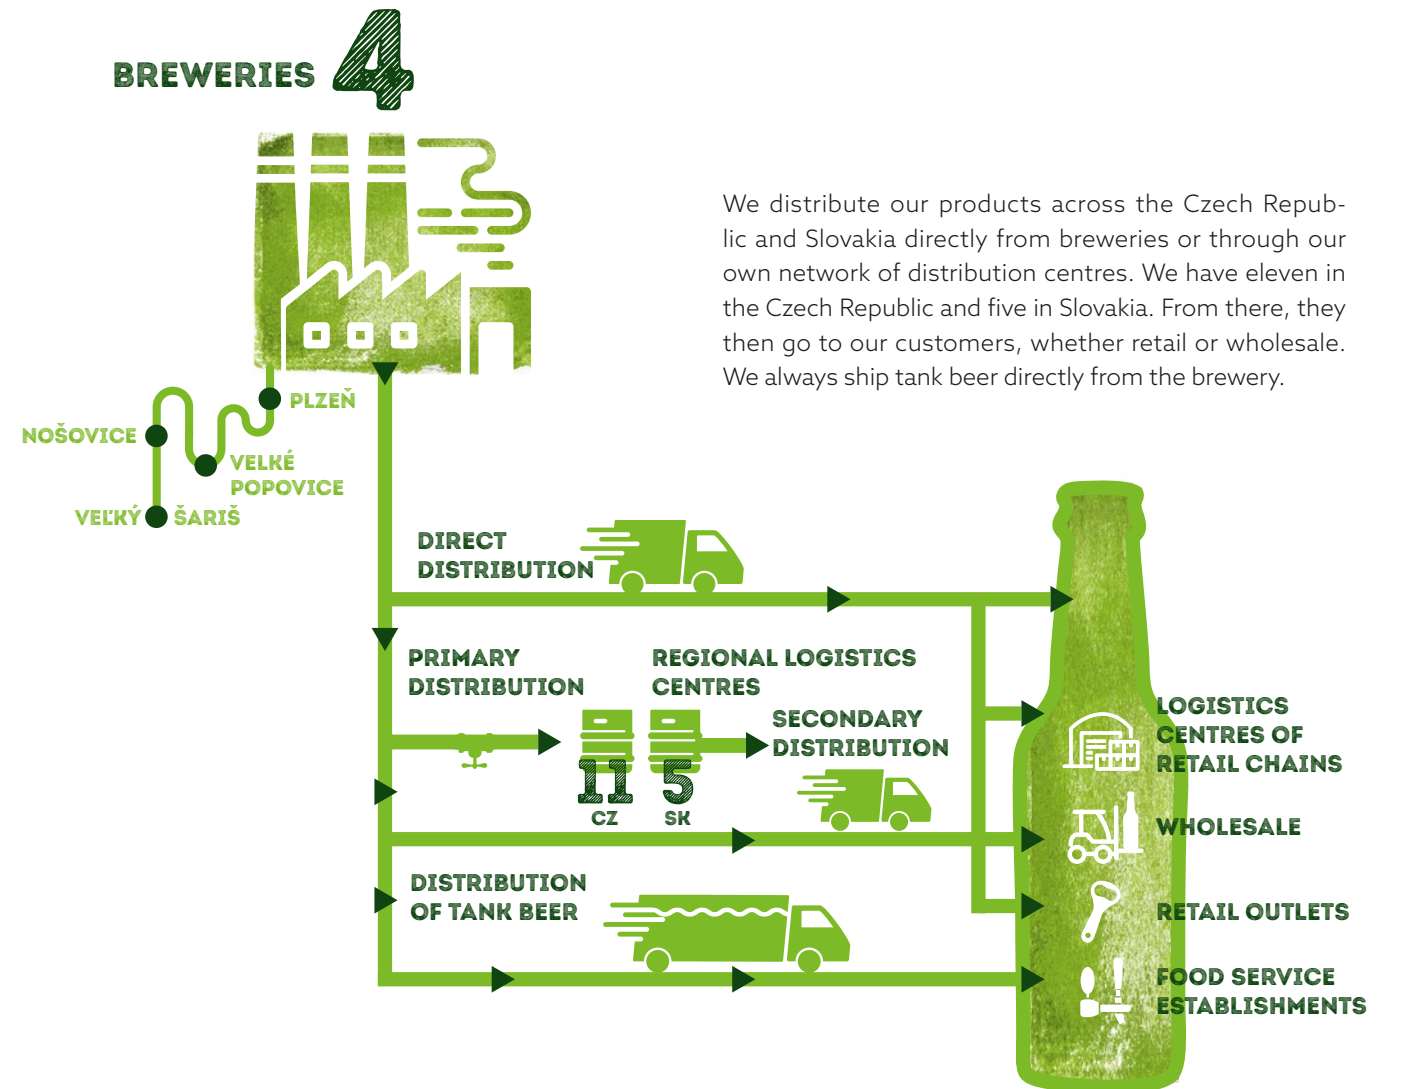

WHERE OUR SUPPLIERS COME FROM

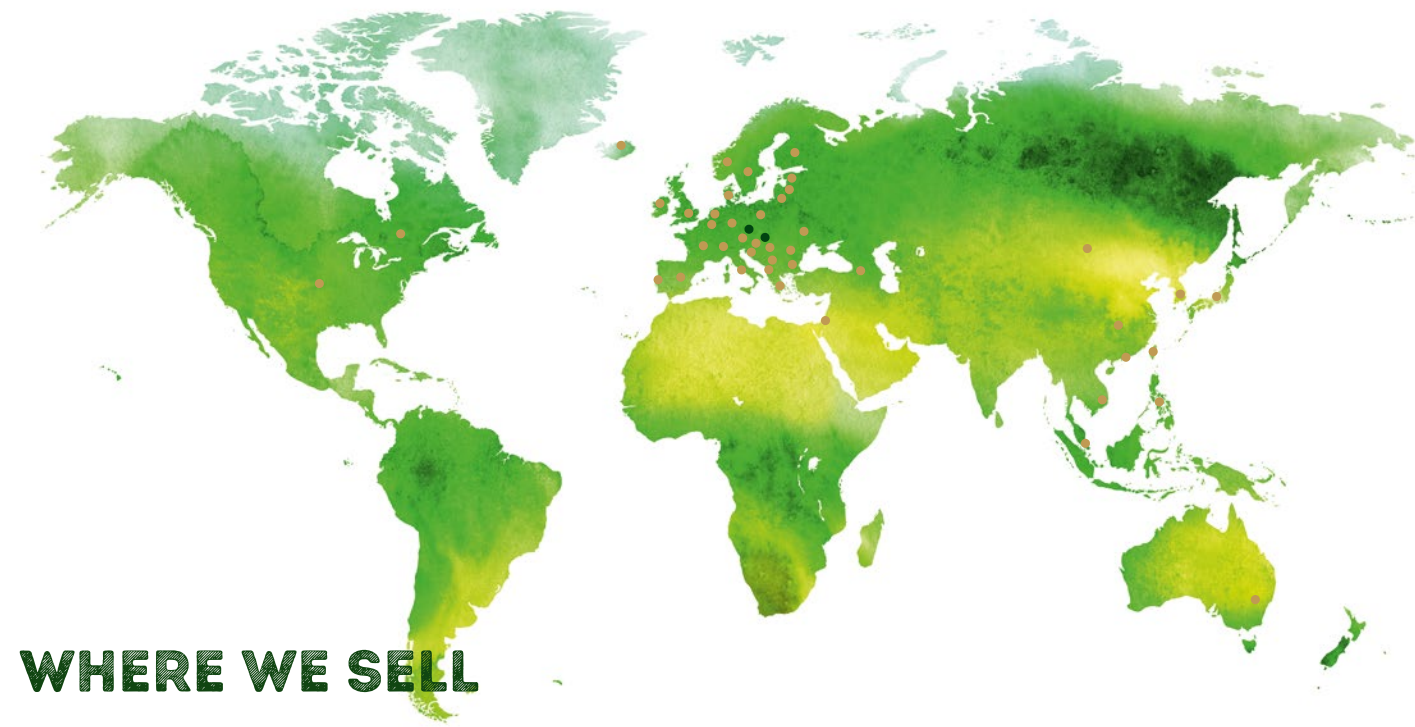

We only make direct purchases in European Union countries and use local suppliers from the Czech Republic and Slovakia as much as possible. The overview includes all raw materials required for the production of our products, including production inputs and all packaging materials. In the coming period, we will also supplement the overview with indirect purchases, which mainly include purchased services and energy. Even in these categories we mainly cooperate with local suppliers or with partners from EU countries where necessary.

DISTRIBUTION OF PRODUCTS TO CUSTOMERS

We distribute our products across the Czech Republic and Slovakia directly from breweries or through our own network of distribution centres. We have eleven in the Czech Republic and five in Slovakia. From there, they then go to our customers, whether retail or wholesale. We always ship tank beer directly from the brewery.

PILSNER URQUELL WAS ONE OF THE FIRST EUROPEAN BEERS WHICH BECAME POPULAR IN THE U.S.A. THE PILSNER BREWERY BEGAN EXPORTING IT HERE IN 1873, JUST THREE DECADES AFTER ITS ESTABLISHMENT. THE BEER WAS TRANSPORTED ACROSS THE OCEAN BY SHIP IN WOODEN BARRELS SEALED WITH WAX STOPPERS, WHICH WERE COOLED WITH ICE BEFORE LOADING.

IN NEW YORK ALONE PILSNER URQUELL IS ON TAP IN NEARLY 500 RESTAURANTS

42

WE EXPORT OUR PRODUCTS TO THIS MANY COUNTRIES AROUND THE WORLD

IT'S GETTING A LITTLE WARM IN HERE. CARBON EMISSIONS ARE TO BLAME.
BY 2030, ALL OF OUR BREWERIES WILL BE CARBON NEUTRAL.

IV CARBON NEUTRALITY

EVEN THOUGH ONLY 14% OF EMISSIONS COME DIRECTLY FROM OUR BREWERIES, OUR GOAL IS TO BRING THEM DOWN TO ZERO. ON THE WAY TO CARBON NEUTRALITY, WE MAINLY RELY ON RENEWABLE ENERGY SOURCES. WE ARE INSTALLING PHOTOVOLTAICS ON BREWERY ROOFS AND MORE AND MORE HEAT IS GENERATED FROM BIOMASS. BREWERIES ARE NOT THE FINAL STEP, WE ARE GRADUALLY LOWERING THE CARBON FOOTPRINT OF OUR ENTIRE VALUE CHAIN.

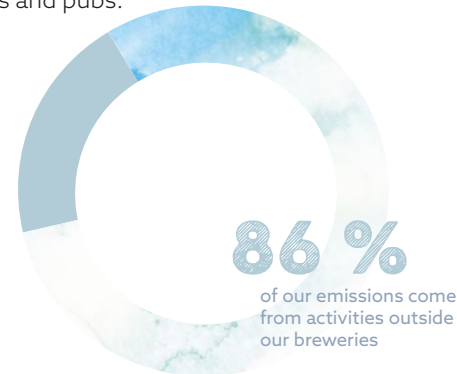

64

OUR CARBON FOOTPRINT

OUR CARBON FOOTPRINT

More than 85% of the emissions associated with our products come from activities outside our breweries. These emissions are generated during barley and hops cultivation and processing, in the transport of ingredients to our breweries and in the distribution of finished products to our customers. They are also linked to the packaging we use and the cooling of beer in shops and pubs.

66

PHOTOVOLTAICS

67

ON THE WAY TO RENEWABLES

69

TRANSPORT AND LOGISTICS

70

EMISSIONS

REDUCING OUR CARBON FOOTPRINT

Over the long term, we have succeeded in reducing the share of Scope 1 and Scope 2 production emissions. While in 2019, which we have set as the baseline for measuring emissions reductions, these emissions accounted for 21% of total CO₂ emissions, in 2023 they only accounted for 14%. We have reduced total emissions across the entire value chain by 19% in the Czech Republic and Slovakia since 2019.

OUR COMMITMENT FOR 2030

OUR BREWERIES WILL BE CARBON NEUTRAL. WE WILL REDUCE THE CARBON FOOTPRINT OF OUR VALUE CHAIN BY 30%.

For production emissions, our primary focus is now on a full transition to renewable electricity sources at all our breweries. A big issue here is heat sources, which now account for more than half of our manufacturing emissions. In this area we have already succeeded in switching to heat from biomass in the Plzen brewery, and we continue looking for emission-free heat sources for other breweries. For the future, we plan partial electrification and the use of heat pumps, with biogas from renewable sources being the likely future primary source of our heat. We also count on further streamlining of energy use in individual breweries.

Our efforts to reduce emissions along the entire value chain primarily focus on packaging, where, as a rule, increased circularity leads to a reduced carbon footprint. See the [Packaging](#) chapter for details. Another major area generating emissions is product cooling at our customers' premises, particularly in catering establishments. The Smart Taproom project, which we write about in the [Water](#) chapter, will reduce emissions in this area. In agriculture, we aim at reducing external inputs in crop production and promote regenerative agriculture, which we are testing through the FOR BARLEY and BLOSSOM FOR HOPS projects described in the [Ingredients](#) chapter.

We are guided by the Asahi Europe & International Group Sustainability Policy, which sets out the basic definitions, allocation of responsibilities, the ways to measure and calculate emissions, the methods of data verification as well as the areas we should focus on in reducing our carbon footprint. Our activities in the area of carbon footprint reduction are also guided by the Group's S-EBITA policy, which defines the internal carbon price, the areas included in the calculation of the economic result net of negative carbon externalities, and the way S-EBITA is used to evaluate the return on new investment projects with an impact on the overall carbon footprint of the company. The Sustainability Information Verification Rules set out the method of third-party verification and validation of data, the required standards and disclosure requirements for the company's carbon footprint, and carbon reduction activities.

19 %

Reduction of total seed-to-glass emissions since 2019

48 %

Scope 1 and Scope 2 production emissions reduction since 2019

PHOTOVOLTAICS IN BREWERIES

Plzeňský Prazdroj is actively working on reducing its carbon footprint, which is also demonstrated by an extensive programme of solar panel installations on the roofs of its brewery buildings. The first solar power plant was launched at the Velké Popovice brewery, where the 288 panels installed on the roof of the wastewater treatment plant now cover approximately 12% of its consumption. In the near future, we plan to install another 466 panels on the bottling line, which will cover about 10% of its energy consumption. These measures are part of the company's goal to achieve carbon neutrality in production by 2030.

Further photovoltaic installations are planned for the roofs of the Radegast brewery in Nošovice and the Plzen brewery. The plan is to install a total of 3,400 solar panels with a total area of 23,000 m².

ANNUAL ELECTRICITY PRODUCTION FROM THESE PANELS WILL REACH ALMOST 1,600 MWH, COVERING 2.4% OF THE TOTAL ENERGY CONSUMPTION OF ALL DOMESTIC BREWERIES OF PRAZDROJ AND CUTTING UP TO 500 TONS OF CO₂ EMISSIONS PER YEAR.

The most significant deployment of photovoltaics will be implemented in Nošovice, where we will install 1,750 panels on the roof of the automated warehouse, which will cover all of the warehouse consumption and 36% of the can line consumption. The Plzen brewery plans to install more than a thousand panels on the roof of its new automated warehouse, which will cover more than 48% of its energy consumption. The commissioning of this warehouse reduced CO₂ emissions by 500 tonnes in 2023, thanks to the reduction in the use of forklifts and the switch to electric drives.

ON THE WAY TO RENEWABLES

Due to spatial limitations, it is not possible to solely cover the consumption of all breweries from solar panels directly on the breweries' premises. The investment in solar energy is part of Plzeňský Prazdroj's broader sustainability strategy, which includes purchasing green electricity from external suppliers and supporting the creation of new sources that could cover our consumption and contribute to greening the entire energy network. Heat is equally important. For example, in Plzen, we have been taking thermal energy generated by burning wood chips from Plzeňská teplárenská for two years now and thanks to this we have managed to reduce the emissions of the Pilsen brewery by 74%.

IN 2023, WE STARTED TO BUY COOLING GENERATED BY RENEWABLE SOURCES FOR THE PLZEN MALT HOUSE, WHICH REDUCED OUR EMISSIONS BY AROUND 700 TONNES OF CO₂ PER YEAR.

These steps significantly contribute to reducing emissions and represent the key components of our plan to achieve a complete transition to renewable energy by 2025.

Plzeňský Prazdroj is also working on reducing the energy intensity of production and logistics through measures such as residual heat recovery, more efficient insulation and lower energy consumption. By taking these steps, we want not only to reduce our carbon footprint, but also to contribute to sustainable development and environmental protection.

8.8 hectares is the area covered by the new solar park, which will be the primary source of electricity for the Šariš brewery

ELECTRICITY IN THE ŠARIŠ BREWERY WILL COME 100% FROM RENEWABLE SOURCES

Prazdroj is approaching another significant milestone in sustainability. From 2025, on the Šariš brewery will use emission-free electricity from renewable sources, which will primarily be taken from the newly built solar park in the nearby municipality of Iľiašovce. The solar power plant will result from the cooperation between Plzeňský Prazdroj and Enery.

Šariš Brewery's switch to renewable sources represents another step on our path to carbon neutrality in production, which we aim to achieve by 2030. Prazdroj will become the first company in Slovakia supporting construction of the new local solar power plant by its long-term commitment. The solar park in Iľiašovce will be built in 2024, together with the brewery's own solar power plant on its premises.

The Šariš brewery will thus switch to production powered exclusively by renewable sources of electricity, cutting 1,386 tonnes of carbon dioxide emissions per year and reducing the overall carbon footprint of production by approximately 18%.

The new solar park will be built thanks to the unique Virtual Power Purchase Agreement (VPPA) between Plzeňský Prazdroj and the Austrian company Enery, the first contract of this type in Slovakia.

TRANSPORT AND LOGISTIC MEASURES

In 2023, we continued short-term testing of electric MB eSprinter vans and trucks from Volvo FL Electric in our distribution. In 2024, we plan to launch long-term testing of the Volvo FH 42T Electric truck, which should cut up to 64 tonnes of CO₂ emissions per year.

On the Plzeň-Nošovice route we use a direct train line for transport, which helps cut up to 70 tonnes of CO₂ emissions per year.

Scope 3

ENERGY CONSUMPTION AND CARBON FOOTPRINT IN PRODUCTION SCOPE 1, 2

ENERGY CONSUMPTION (UOM/HL)

Location	Year	Consumption (UOM/HL)
Plzen:	2022	85.67
	2023	88.54
Nošovice:	2022	69.69
	2023	69.19
Velké Popovice:	2022	84.08
	2023	72.31
Šariš:	2022	72.66
	2023	70.87

PRODUCT-RELATED EMISSIONS (KG CO₂E/HL)

Location	Year	Emissions (KG CO ₂ E/HL)
Plzen:	2022	2.56
	2023	2.66
Nošovice:	2022	4.41
	2023	4.26
Velké Popovice:	2022	5.45
	2023	4.60
Šariš:	2022	3.99
	2023	3.53

The Plzen brewery experienced a temporary increase in energy consumption in 2023 due to the introduction of key technological innovations and automation, in particular the installation of a new multifunctional bottle line and a fully automated warehouse. We are also introducing new technologies to meet growing market demands, for example for smaller packaging types and returnable bottles. However, we are preparing optimizations for the coming period that will lead to future reductions in the brewery's energy consumption.

Emissions from various forms of business travel associated with air, rail, sea and road transport are excluded from the summary as they represent less than 0.5% of total emissions. Advertising and marketing materials account for less than 1% of total emissions. They are therefore excluded on the basis of negligible emission magnitudes and data availability. Energy consumption associated with storage or distribution centres downstream of the primary distribution centre has not been included in the calculation due to data availability and the ability to influence the situation. These are mostly warehouses of our customers, especially in retail and wholesale. Capital estate related emissions are difficult to calculate and influence; estimates based on total capital expenditure quantify total emissions at less than 1% of company emissions. Capital expenditure has been removed from the system boundaries for reasons including materiality and the ability to influence it. It is very difficult to accurately determine emissions associated with transporting beer from stores to consumers. These were excluded on the basis of data availability and the ability to influence the situation. For the same reason, the system boundaries do not include beer cooling at the end consumers.

ABSOLUTE EMISSIONS DIRECT AND INDIRECT (T CO₂E)

In 2023, we switched to a new Scope 3 calculation methodology where we calculate 100% of malting barley emissions directly from grower data. To integrate old data with data calculated by the new methodology, we have also recalculated our carbon footprint in the previous years 2019-2022.

Explanatory notes: The calculation model was developed in accordance with the 2004 GHG Protocol Accounting and Reporting Standard and its Supplement and the 2011 GHG Protocol Corporate Value Chain Accounting and Reporting Standard. It also takes into account the 2019 version 4.1 of the BIER sectoral guidelines for greenhouse gas emissions in the beverage industry. The methodology also takes into account the European Commission's 2018 PEF product footprint categorisation rules for beer, the 2011 GHG Protocol's life cycle assessment accounting and reporting standards and the PAS 2050:2011 certification principles. The calculation method for value-chain-related emissions in Scope 3 category was developed and the calculation was prepared by Verco Advisory Services Ltd. The methodology was externally verified by LRQA Group Ltd.

The system boundary includes all emission-producing activities that significantly contribute to the total greenhouse gas emissions related to beer across its entire life cycle. It covers all products produced in the Czech Republic and Slovakia, including exports, with the exception of volumes brewed under licence abroad, which were excluded on the basis of limited access to data and lack of ability to influence the situation.

Absolute figures also include business travel, which is not included in the survey and accounts for less than 0.5% of our total emissions.

The calculation takes into account the six greenhouse gases covered by the Kyoto and Montreal Protocols: carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), sulphur hexafluoride (SF₆), fully fluorinated hydrocarbons (PFCs) and hydrofluorocarbons (HFCs). The total footprint is expressed as carbon dioxide equivalent (CO₂e) using the global warming potential values provided by the IPCC (2007).

Scope 1

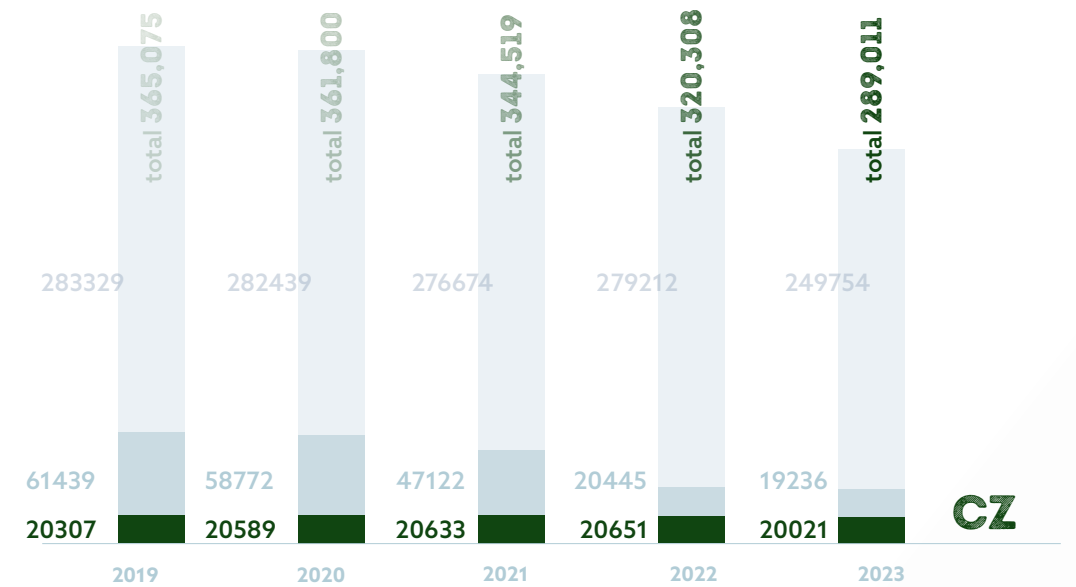

Direct emissions associated with fuel combustion by fixed or mobile sources owned or controlled by the company, and emissions resulting from technological processes or refrigerant release.

Scope 2

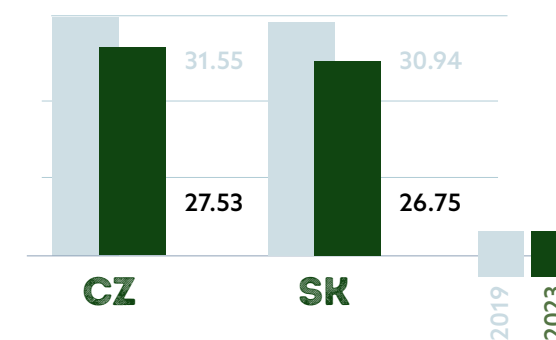

Indirect emissions resulting from the consumption of purchased or externally supplied electricity or heat, process steam and cold air.

Scope 3

Other indirect emissions originating in the value chain, e.g. emissions associated with the cultivation or processing of ingredients, transport of production inputs and finished products, packaging and materials or use of the product by end users.

VALUE CHAIN CARBON FOOTPRINT KG CO₂E/HL

EMISSION CATEGORY

CO₂ emission intensity (kg CO₂e/hl) per product in Scope 3

AGRICULTURE AND INGREDIENTS

CZ: 2.76 SK: 4.69

This covers emissions related to all ingredients needed to produce beer and other products, especially barley and hops. This covers emissions associated with the ingredient's cultivation, including fuel combustion on farms, electricity generation consumed on farms, and the production of fertilisers and plant protection products. For malting barley, 100% of Scope 3 emissions for both the Czech Republic and Slovakia are calculated based on Scope 1 and 2 emission data received directly from suppliers, with the exception of data on diesel and other fuel consumption on farms. To consolidate the data according to the new methodology, we have now recalculated the data for 2019-2022 as well.

INGREDIENT PROCESSING

CZ: 0.64 SK: 0.53

Includes emissions from barley malting and hop processing. A total of 79% of Scope 3 ingredient-processing-related emissions for the Czech Republic and 51% for Slovakia are calculated based on Scope 1 and 2 emission data obtained directly from suppliers. In the overview of the total footprint, this also covers Scope 1 and Scope 2 emissions associated with the operation of in-house malt houses in Plzen, Nošovice and Velký Šariš.

PRODUCTION IN BREWERIES

CZ: 1.94 SK: 3.16

This covers emissions associated with fuel combustion to produce heat in breweries as well as emissions associated with brewery-consumed electricity generation. Included are also emissions from purchased CO₂, emissions from water consumption required for beer production and emissions associated with the purchase of chemicals used in breweries.

PACKAGING

CZ: 8.82 SK: 10.89

This includes all production and end-of-life emissions related to the purchased packaging materials, from the extraction of raw materials to the final production phase. Covered are all purchased primary, secondary and tertiary packaging materials used for finished product packaging. For 2023, 72 % of packaging-related emissions in the Czech Republic and 76 % packaging-related emissions in Slovakia were calculated based on Scope 1 and 2 emissions data obtained directly from suppliers. The supply chain emissions of these suppliers are calculated using secondary data sources. The calculation methodology takes into account the impact of the returnable bottle deposit system in Slovakia with a one-year delay, and assumes a collection rate of 71 % for cans, i.e. the 2022 collection rate.

TRANSPORT AND LOGISTICS

CZ: 5.32 SK: 4.66

This covers emissions from all modes of transport used to transport barley from farms to malt houses, emissions from transporting malt and other brewing ingredients, and emissions from transporting packaging to breweries. These emissions are calculated based on the estimated distance from the supplier to the production sites. Downstream logistics includes all logistics activities related to the distribution of finished products to their sales points. This includes both domestic and export downstream logistics. For 2023, 47 % of the emissions from transporting finished products in the Czech Republic and 90 % in Slovakia were calculated based on actual fuel consumption or distance-based data. The remaining emissions were calculated using average distances and assumed vehicle type. This calculation does not include greenhouse gas emissions associated with energy consumption in warehouses and secondary distribution centres downstream of the primary distribution centre. Excluded are also greenhouse gas emissions associated with the transport of waste from end consumers to landfills or recycling facilities.

COOLING

CZ: 7.91 SK: 2.56

This includes electricity consumed by cooling equipment at the points of sale - refrigerators in and outside shops and taps rooms in pubs. Covered are also emissions associated with electricity generation as well as loss of refrigerant gas. Excluded are emissions from domestic storage and cooling of products at the end consumers.

THE FACT THAT INCREASING CONCENTRATIONS OF CARBON DIOXIDE IN THE ATMOSPHERE LEAD TO A WARMING OF THE EARTH'S SURFACE WAS POINTED OUT AS EARLY AS 1896 BY THE NOBEL PRIZE-WINNING SWEDISH CHEMIST SVANTE ARRHENIUS IN HIS THEORY EXPLAINING THE ICE AGES. HOWEVER, IT WAS NOT UNTIL THE 1980S THAT THIS ISSUE BEGAN TO BE TAKEN MORE SERIOUSLY AND THE INTERGOVERNMENTAL PANEL ON CLIMATE CHANGE (IPCC) WAS ESTABLISHED AS LATE AS IN 1988. THE PANEL REGULARLY PUBLISHES REPORTS ON THE STATE OF THE CLIMATE AND WARNS OF THE IMPACTS OF RISING GREENHOUSE GAS CONCENTRATIONS.

 Scope 3 emissions broken down by GHG Protocol categories can be found in the [Standards](#) chapter.

V
WATER

WE HAVE TO BE ECONOMICAL WITH OUR WATER, OTHERWISE WE MIGHT RUN OUT OF IT ONE DAY. THE LESS WATER IS AVAILABLE IN GLOBAL RESOURCES, THE MORE WE HAVE TO SAVE IT. IN OUR BREWERIES, WE USE COMMON SENSE TOGETHER WITH MODERN TECHNOLOGY. AND WE ALSO TRY TO RETAIN WATER IN THE LANDSCAPE.

86

SMART
TAPROOM

The situation with water resources in the Czech Republic is worsening due to climate change, which is causing irregular rainfall and more frequent droughts. Moreover, rainfall, when it does come, tends to be intense, so water runs off quickly and does not soak into the soil. For these reasons, groundwater levels keep falling. The vast majority of the water that flows away from us in rivers comes from rain, so we are essentially dependent on it.

Droughts have a negative impact on plants, animals and the drinking water supply, which is of course essential for beer production. We therefore find it necessary not only to help retain water in the landscape, but also to find ways of reducing water consumption in our breweries. In Plzeňský Prazdroj, the most successful in this is the Rade-gast Brewery, which is one of the breweries with the lowest specific water consumption in the world which also helps return water back to nature through its projects.

OUR COMMITMENT FOR 2025

WE PLAN TO REDUCE THE AVERAGE WATER CONSUMPTION IN BEER PRODUCTION TO 2.75 LITRES PER LITRE OF BEER.

Water is one of the basic ingredients in the production of beer and makes up around 90 percent of its content. It is therefore necessary to pay special attention to the care of the water sources used by the breweries. We contacted experts from [Antea Group](#) and had them conduct audits to address the risks in the area of water supply for breweries. Over the past two years, we have also commissioned a Water Vulnerability Assessment (WVA) around all of our breweries, which is in line with AWS (Alliance for Water Stewardship) and TCFD (Task Force on Climate-related Financial Disclosures) standards. This assessment analyses local water resource conditions and helps identify potential vulnerabilities and risks. The results of the audit have confirmed that our water resources are not under direct threat and are in good and sustainable condition. Moreover, the use of water in our breweries does not have a negative impact on the availability or quality of water in our surroundings.

Prazdroj follows the Water Management Directive, which deals with the optimisation and the use of water resources in breweries. This includes control and management of water consumption, efficient use of water in production processes, water quality monitoring, wastewater treatment and compliance with legislative and environmental regulations. The directive also sets out procedures for pollution prevention and supports initiatives to reduce the brewery's water footprint. Each brewery has a detailed, tailored procedure for compliance with this directive.

We are also guided by the Asahi Europe & International Group Sustainability Policy, which sets the basic definitions, measurement, consumption calculation and data validation for water management, inter alia.

WATER RESOURCES OF OUR BREWERIES

We draw water mainly from our own sources, boreholes and wells in the vicinity of our breweries. We try to use them in a way that preserves them for future generations as well.

WE ARE REDUCING WATER CONSUMPTION

At Plzeňský Prazdroj, we have long been trying to reduce water consumption in our breweries, which was demonstrated in 2023, when we **used an average of 2.8 litres of water to produce one litre of beer**. Record low values were again achieved by the Radegast brewery, whose average consumption for the second year in a row was only 2.29 L/litre of beer. These figures include all the water the brewery needs to produce and bottle its beer. It is not only the water contained in the beer, but also the water evaporated during brewing, used for sanitation, washing, rinsing, disinfection and cooling.

We continue to optimize Clean in Place technologies in all our breweries, which allow us, for example, to use bag-free stainless steel beer tanks on a large scale. We use ultrafiltration units that capture wastewater and purify it into potable water, for example for rinsing.

PLZEŇ

We draw more than half of our water from our own five wells in the Roudná city quarter. The rest comes from suppliers whose sources are the Mže and the Úhlava rivers.

VELKÉ POPOVICE

Approximately two-thirds of the water used is drawn from a total of eleven wells in the vicinity of the brewery. The rest is taken from the Švihov reservoir.

NOŠOVICE

Radegast uses water from the Morávka river and its own three wells in its vicinity.

VELKÝ ŠARIŠ

The brewery draws water from deep wells in the area of the Torysa springs. Another source is represented by its own wells that supply the malt house.

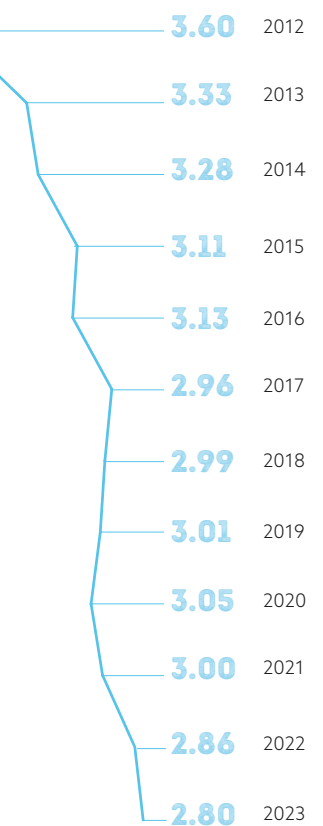

AVERAGE WATER CONSUMPTION PER LITRE OF BEER

DEVELOPMENT OF WATER CONSUMPTION IN BREWERIES

total L/litre of beer)

Detailed information can be found in the Standards chapter.

WATER PROJECTS AT RADEGAST BREWERY

Radegast has managed to reduce its water consumption by more than 40% over the past 15 years, making it one of the best breweries in the world in terms of water efficiency and water source care.

Now, Radegast is one of the first in Europe to map its water footprint from seed to glass, including beer ingredient growing and the water footprint of packaging and beer tapping in the pub. The results of the study, which is carried out by the T. G. Masaryk Water Research Institute, will be available in 2024.

RADEGAST:
FIGHT FOR WATER

Water retention in the landscape is also addressed by the FOR BARLEY and Blossom for Hops projects. For more information see the Ingredients chapter.

IRRIGATION BAGS FROM RADEGAST

Radegast Brewery has long been active in the protection of water resources and supports projects aimed at water retention in the landscape. In 2023, the brewery donated 150 special irrigation bags for trees to the Frýdek-Místek municipality. These are used for efficient irrigation, water saving and to increase the chances of the tree rooting. More than 500 irrigation bags have already been used in this way in Czech and Moravian towns and cities. The brewery's own employees also contribute to nature protection by caring for the mountain meadows at Radhošť or planting trees in the Beskydy Mountains during volunteer days.

500

irrigation bags were distributed in Czech and Moravian towns and cities

RADEGAST BREWED BEER FROM AIR

In 2023, we drew attention to the issue of water loss in nature with the beer-brewed-from-air event. The intention of this awareness-raising event was to point out ways to address this issue. As the first brewery in Central Europe, Radegast brewed beer from water obtained from air humidity in cooperation with the University Centre for Energy Efficient Buildings (UCEEB) of the Czech University of Technology in Prague and the Karbox company. The EWA equipment used for this project is able to extract water even in very dry and hot environments. It is primarily used as an emergency source of drinking water, for example, for emergency services in the driest and hottest places in the world, where it can provide about 35 litres of water per day. Industrial production of beer by this method would of course be impossible or very expensive. The lager named Futur is proof that beer could be brewed this way, but it is also a message that we don't want a future without water. That is why we have long been working on reducing water consumption and protecting its sources.

29

new ponds were formed thanks to Radegast

8

sites were selected with public assistance

A MILLION CROWNS TO BUILD PONDS ACROSS THE CZECH REPUBLIC

Radegast has long been involved in water retention in the landscape. The brewery has newly joined forces with the Czech Forest Management and supported the building or restoration of ponds in forests across the Czech Republic with CZK 1 million. Thanks to the brewery the projects were selected with involvement of the general public. In 2023, this supported the creations of a total of 29 ponds in eight locations.

WATER PURIFICATION IN BREWERIES

PLZEN: the brewery first neutralizes the pH, then the wastewater goes to the municipal WWTP, where complete purification is carried out.

VELKÉ POPOVICE: wastewater is completely treated by the brewery in its own wastewater treatment plant.

NOŠOVICE: wastewater is pre-treated using anaerobic technology in the brewery.

VELKÝ ŠARIŠ: wastewater goes to the municipal wastewater treatment plant without primary treatment.

NOŠOVICE PONDS

More than twenty years ago, the Radegast brewery built a system of interconnected ponds that naturally purify stormwater and water drained from the brewery. These ponds also increase the diversity of biotopes in the Morávka river floodplain. The treatment process occurs during rainwater flow through the system, when residual organic pollution is naturally removed. The ponds cleaned over 40,609 m³ of water in 2023.

we have biological ponds on the Morávka river

WATER QUALITY IMPROVEMENT IN VELKÉ POPOVICE

The Velké Popovice brewery continues its project aimed at water quality improvement in the Pivovarský pond. Through the application of special bacteria that remove organic silt and reduce the amount of nitrogen compounds and other nutrients in water, 2,400 m³ of organic silt was removed by the first dose. The project resulted in improved visual water quality, elimination of cyanobacteria and increased water oxygen concentration.

The Velké Popovice brewery purifies water directly in its own wastewater treatment plant, so the water discharged from the brewery meets strict environmental standards.

ENERGY-SAVING MEASURES IN BREWERIES

Radegast was the first in Central and Eastern Europe to introduce the upflow anaerobic sludge blanket (UASB) system for wastewater pre-treatment. The treatment plant also produces biogas, which is further used in the brewery's boiler room as an environmental fuel for heat production. The result is lower CO₂ emissions.

Further savings are generated by a project aimed at reuse of water from liquefaction of fermentation-produced CO₂. Water that used to go down the drain is now used in the plant cooling system. By this measure, the brewery has saved more than 100,000 m³ of water in ten years, which is roughly equivalent to the volume of 40 large swimming pools.

By installing an air compressor with a closed cooling circuit that does not consume additional water, Radegast saves over 50,000 m³ of water per year. Eco-friendly urinals installed in the Radegastovny will in turn save water in these pubs. This saving may amount to up to 250,000 litres of drinking water per month.

The wastewater treatment plant, which Radegast put into operation in 1995, is also part of the brewery's environmentally friendly approach. Since then, the new technology has reduced wastewater pollution from the brewery by 91 percent.

Water savings are also achieved thanks to the FOR HOPS project, which focuses on sustainable water management in hop-growing areas. Soil sensors and weather stations are installed in the hop fields to monitor the weather, soil and plant conditions and help set up efficient irrigation.

 More about this topic in the [Ingredients](#) chapter.

BIOGAS  is used in the brewery boiler room as environment-friendly fuel

100,000  m³ of water would fill about 40 swimming pools

WC  we have environmentally-friendly urinals in the Radegastovny pubs

91%  is how much we have reduced water pollution in Radegast

FOR HOPS is our project for efficient irrigation of hop fields 

SMART TAPROOM

The Smart Taproom project was initiated by Plzeňský Prazdroj to help pubs and restaurants in the Czech Republic save part of their energy and water costs. Together with the Czech Institute of Informatics, Robotics and Cybernetics of the Czech University of Technology in Prague as the main expert guarantor, and technology companies Microsoft, Aداstra and Smart Technology, we measure the energy and water consumption of the tap and then adjust the tap technology to be more energy and water efficient.

30 %

saving water and energy in pubs is our goal to be achieved through the Smart Taproom project

WE MEASURE THE ENTIRE JOURNEY OF THE BEER FROM BARREL TO GLASS

Experts have installed nearly two thousand sensors in more than fifty pubs in the Czech Republic and Slovakia and are continuously analysing the data obtained from them. The instruments record the temperature of the room where the barrels are stored, the beer flow through the tap line, the temperature in the tap room, the temperature of the beer at the moment of tapping into the glass and the total energy and water consumption in different parts of the tap room. The Smart Taproom project focuses both on possible reductions in electricity consumption and water savings, for example when washing, rinsing and cooling glasses. Maintaining the quality of draught beer is essential. No one has ever made similar measurements on such a large scale.

 Detailed information on water consumption and wastewater treatment in our breweries and malt houses can be found in the [Standards](#) chapter.

THANKS TO THE LATEST SCIENTIFIC DISCOVERIES, WE KNOW THAT THE MOON ALSO HAS WATER. IN 2009, DURING THE CHANDRAYAAN-1 AND LCROSS MISSIONS, WATER WAS DISCOVERED AS ICE IN ROCKS AND IN PERMANENTLY SHADOWED CRATERS AT THE POLES OF THE MOON. SUBSEQUENT MISSIONS IN THE FOLLOWING YEARS CONFIRMED THESE INITIAL FINDINGS.

THEORETICALLY, WE COULD SAVE BEER ON THE MOON

I'M A HOP PLANT AND I'M REALLY AT HOME HERE.
THE LOCAL HOP VARIETIES ŽATECKÝ POLORANÝ ČERVENÁK (ZATEC MEDIUM-RIPENING RED HOPS), SLÁDEK (BREWER), PREMIANT (STAR) AND ŽATECKÝ POZDNÍ (ZATEC LATE HARVEST) GIVE THE BEER ITS CHARACTERISTIC TASTE.

VI INGREDIENTS

WE BUY BARLEY AND HOPS FOR OUR BREWERIES FROM FARMERS WHO PROVIDE GUARANTEED PREMIUM QUALITY. WE ALSO SUPPORT LOCAL FARMERS WITH OUR OWN INITIATIVES, FOR BARLEY, FOR HOPS AND BLOSSOM FOR HOPS, WHICH HELP THEM BETTER COPE WITH THE IMPACT OF CLIMATE CHANGE ON THEIR BUSINESS.

FOR HOPS

102
BLOSSOM
FOR HOPS

It is the ingredients that give our beer its unique taste. We therefore pay great attention to selecting of their suppliers. We work with farmers with whom we share the same sustainability and environmental values. We make sure that the ingredients meet the highest quality criteria, and this requires observing the correct procedures for sowing, crop treatment and harvesting, as well as taking care to ensure proper storage and transport.

In recent years, the quality of our ingredients has been significantly affected by climate change, particularly extreme weather events such as heavy rainfall or prolonged droughts. That's why we consider it our duty to support local farmers and to test new methods of cultivating barley and hops that help crops better withstand weather fluctuations. It is a way to ensure that plants continue to thrive in our region in years to come like today. Our emphasis on using top quality local ingredients enables us to brew beer that proudly bears the **protected geographical designation "České pivo" (Czech Beer)**.

OUR COMMITMENT FOR 2030

PRAZDROJ'S BEERS WILL BE BREWED EXCLUSIVELY WITH INGREDIENTS FROM SUSTAINABLE AGRICULTURE.

BARLEY

In Plzeňský Prazdroj we only use domestic varieties of barley with their distinctive high quality. Their grains are full of flavour and contain the right combination of carbohydrates, enzymes and other substances necessary for the proper malting and brewing process. Thanks to these properties, barley is a key ingredient for the production of traditional Czech beer with its rich flavour and aroma.

IN 2023
WE PURCHASED

146,190
tonnes of barley
from suppliers
within the Czech
Republic

27,884
tonnes of barley
from Slovak
suppliers

**100% OF THE BARLEY FOR THE PRODUCTION
OF OUR BEER COMES FROM CZECH
AND SLOVAK GROWERS.**

Detailed information can be found in the [Standards](#) chapter.

PRAZDROJ IS ONE OF THE LARGEST BUYERS OF BARLEY IN THE CZECH REPUBLIC.

We use barley from 140 farmers and growers in the Czech Republic and from about 40 suppliers in Slovakia. We buy about 175,000 tonnes from them annually in both countries taken together, which represents an area of about 30,000 hectares in the Czech Republic and over 5,000 hectares in Slovakia. We buy most of that quantity from the farmers directly. Barley is processed in the traditional way in the brewery malt houses in Plzen, Nošovice and Velký Šariš. For 2024, we are preparing a pilot project to certify barley growers in the Czech Republic according to the standards of the SAI Platform initiative.

The terms and conditions of purchase are set out in the **Barley Purchasing Directive**, which focuses on the entire process of purchasing for malt houses, from planning and need determination via supplier, warehousemen and transporter selection to quality control and billing. Key steps include regular barley quality checks during the growing season and after harvest, and careful recording and accounting of all deliveries and shipments. The main goal is to ensure sufficient quantities of the best quality barley in the varieties we use for our beer.

FOR BARLEY PROJECT LAUNCHED

In 2023 we launched a **new initiative** called **FOR BARLEY** aimed at promoting Czech malting barley. As with the other ingredients we use, its quality has been negatively affected by climate change in recent years. This makes growing barley risky for some farmers due to weather fluctuations. The reason is that if its quality does not meet the high malting requirements, they have no choice but to sell the crop at a fraction of the price for animal feed purposes. **This is one of the reasons why the area on which barley is grown in the Czech Republic has almost halved in the last 30 years.** According to data from the Czech Statistical Office, in 2023 barley fields covered 192,393 hectares, i.e. around 7% of the domestic arable land.

pro ječmen

7% of arable land in the Czech Republic is currently used to grow spring barley (192,393 hectares)

The FOR BARLEY initiative, in which other institutions such as the Czech University of Agriculture, Mendel University and the JTZE group together with other partners have joined us, applies **regenerative agriculture** methods in combination with the use of state-of-the-art measuring technologies on selected areas. Sowing practices and crops remain the same, only the method of cultivation changes. The main objective of the project is to increase barley tolerance of adverse conditions and to ensure better harvest predictability over a longer period.

The new methods should lead to the abandoning of conventional farming methods, which are characterised by intensive use of chemical fertilisers and pesticides, cultivation of large areas of a single crop and tillage mechanisation. Regenerative practices, on the other hand, aim to bring life back to the soil. We treat soil gently to preserve its naturalness, not disturbing it by deep ploughing, for example. We keep the fields continuously sown or covered to protect them from erosion and to allow the roots of the plants to loosen the soil and retain water. We also use interim crops to protect the soil between the main crops and to replenish nutrients in a natural way. All this should lead to an increase in organic matter content in the soil and thus to reduced need for chemical fertilisers, which has a positive effect on malting barley quality.

The barley needed for our production in the Czech Republic would cover an area equivalent to more than six times the size of the Lipno reservoir.

The barley needed for our production in Slovakia would cover an area equivalent to almost twice the size of the Liptovská Mara reservoir.

The FOR BARLEY project will produce results in about five years, during which time scientists will compare data from regenerating areas with those using conventional farming practices. They obtain it continuously from meteorological stations, soil probes, satellite images and soil analyses. Scientists selected the best sites to ensure the greatest possible diversity of climates and soil types. Thanks to this, the knowledge gained by the project can be used for other growers in the Czech Republic.

RESCUE OF MALTING BARLEY IN SLOVAKIA CONTINUES

Slovak farmers are experiencing similar complications with malting barley cultivation due to climate change. Slovakia used to be one of the malting superpowers, and in 2020 it was still the fifth most important malt exporter in Europe. However, the area of malting barley here has fallen dramatically in recent years due to weather fluctuations. In 2022, Prazdroj joined forces with the Ekopolis Foundation and experts from the National Forestry Centre on the Slovak FOR BARLEY project to open a discussion on the future of sustainable malting barley cultivation in Slovakia and to support local farmers. The project uses the principles of agroforestry by combining crop cultivation with targeted tree planting and dividing the field into smaller plots. This will prevent soil erosion and runoff of the most fertile arable soil particles, while increasing the ability of the soil to retain water.

After a pilot project at the Radošinka agricultural cooperative in Velké Ripňany, we expanded the initiative to other locations in 2023. The principles of agroforestry were gradually applied by growers from Rozkvet in Odorín, Prašice in Jacovce and Dvory nad Žitavou. Among other things, more than 500 trees were planted, including poplars, oaks, maples, mulberry trees, wild apple and pear trees, as well as other tree species. Farmers' interest in joining the project is growing, so we will expand tree planting to other locations.

500

trees and bushes have been planted by us. You will find poplars, oaks, maples, mulberry trees, wild apple and pear trees among them.

THE AIM OF THE SLOVAK FOR BARLEY PROJECT IS NOT ONLY TO IMPROVE THE CONDITIONS FOR GROWING MALTING BARLEY, BUT ALSO TO IMPROVE THE ENVIRONMENT AND SUPPORT THE RESTORATION OF FAUNA AND FLORA IN SLOVAKIA.

HOPS

Czech hops give the beer its unique bitter taste and exceptional aroma. Together with water and barley, it is a vital ingredient that needs care so that millions of people around the world can continue to enjoy Czech beer.

THE CZECH REPUBLIC IS ONE OF THE WORLD'S LEADERS IN HOP PRODUCTION WITH MORE THAN A THOUSAND YEARS OF TRADITION.

Approximately 6,000 tonnes of hops are produced annually on 5,000 hectares, over 80% of which is represented by the most famous variety Žatecký poloraný červenák (Zatec semi-ripened red hops).

However, the Czech hop harvest fluctuates greatly due to weather changeability and irregular or localised rainfall. Recent year-on-year fluctuations in harvests have repeatedly exceeded a thousand tonnes, which could have implications for the local economy as well as the brewing industry in the future. In addition, the lack of water affects the alpha acid content and hops could lose their typical bitterness. All these are reasons why Prazdroj has focused its efforts on the long-term sustainability of Czech hop production.

IN 2023
WE PURCHASED

606

tons of hops for
breweries in the
Czech Republic

43

tons of hops
for the brewery
in Slovakia

88 %
OF HOPS PURCHASED
COME FROM
CZECH GROWERS

At Prazdroj we use proven varieties such as Žatecký poloraný červeňák (Zatec semi-ripening red hops), Sládek (Brewer), Premiant (Star) and Žatecký pozdní (Zatec late harvest), which give our beer its characteristic taste. Most of the hops purchased come from Czech hop growers. For the production of special beer editions and flavoured drinks we also import foreign hop varieties that are more suitable for these purposes. After harvest, each batch of hops is carefully stored in climate-controlled warehouses to protect them from oxidation until the brewer decides to put them in the brewhouse to enrich our beer with their unique bitterness and typical aroma.

THE FOR BARLEY PROJECT HAS ACHIEVED ITS FIRST RESULTS

The FOR BARLEY research project, which we launched in 2021 in collaboration with Microsoft and the Hop Institute, has produced its first major findings after two years of measurements. Researchers identified the optimal amount of water needed for hop growth and obtained information on how long water stays in the soil and when exactly hops start to suffer from a lack of moisture. This knowledge has already helped hop growers in Chrástany to improve irrigation efficiency and increase yields by up to 40%.

FOR MORE INFORMATION ABOUT THE PROJECT, VISIT WWW.PROCHMEL.CZ

The project has so far involved six hop farms in the Žatecko region, where sensors, soil probes and weather stations monitor the condition and development of plants, soil moisture and composition, and climatic conditions. The measured data is collected in an online database accessible to all participating growers. In addition, TensoAI, our partner company, developed an irrigation model in 2023 that will allow hop growers to plan irrigation according to the weather and plant needs. The upcoming app, which will be tested with selected growers during the 2024 season, will be available to all hop growers in the future to maintain the quality and yield of the domestic hop production, one of the top three globally in terms of volume.

An aerial photograph of a hop farm. The rows of hop plants are arranged in a grid pattern. A large, irregular shape in the center of the field, resembling a beer mug, is formed by different types of plants, including chamomile and mustard seeds, which are in bloom. The surrounding hop plants are green and have small white flowers. The soil between the rows is a reddish-brown color.

THE LARGEST BEER MUG CREATED FROM FLOWERS IN THE CZECH REPUBLIC. ON THE HOP FARM IN BĚSNA, WE USED 16 KG OF CHAMOMILE AND SEVERAL TYPES OF MUSTARD SEED TO PLANT A GIANT BEER MUG THAT WAS 60 METRES HIGH AND 47 METRES WIDE. IT BLOSSOMED, WAS ENTERED INTO THE CZECH BOOK OF RECORDS AND BECAME THE RECORD HOLDER OF THE YEAR IN ITS CATEGORY. THE WIDE PUBLICITY OF THIS EVENT HELPED US ATTRACT ATTENTION TO THE BLOSSOM FOR HOPS PROJECT OF REGENERATIVE AGRICULTURE.

BLOSSOM FOR HOPS: RETURN TO THE ROOTS

**FLOWERS, GRASSES
AND PERENNIAL
CROPS TO HELP
NOURISH THE HOP
GARDEN AND,
THANKS TO THEIR
STRONG ROOTS,
RETAIN MOISTURE
AND PREVENT SOIL
EROSION.**

FLOWERS WILL HELP IMPROVE THE SOIL'S ABILITY TO RETAIN WATER AND BOOST HOP GROWTH NATURALLY

Ten hop gardens in the Žatecko region blossomed in 2023 as part of Plzeňský Prazdroj's new project **Blossom for Hops**. We planted flowers, grasses and perennial crops between hops rows in selected hop gardens to help nourish the hop garden and, thanks to their strong roots, retain moisture and prevent soil erosion. At the same time, some of them became sheep pastures. With the help of modern technology, we monitor the soil and the condition of the plants on 20 hectares of hop gardens.

10

hop gardens in the Žatecko region in 2023 blossomed

kytky pro chmel

The blossom for Hops project is unique in that it is a scientific research project that will continuously compare the condition and yield of hops from regenerating hop gardens and hop gardens of the same area and in the same locations, where conventional farming methods have been maintained, over a period of five years. Blossom for Hops is another initiative of Prazdroj, which reflects its efforts to ensure sustainability of key ingredients for Czech beer production. The project, which was designed in cooperation with the hop-growing Arix Czech Hop group, the Czech University of Agriculture and the Postoloprty Laboratory, is intended to mitigate the effects of climate change and preserve the quality and quantity of hops despite the recently unstable weather.

FOR MORE INFORMATION ABOUT THE PROJECT VISIT WWW.KYTKYPROCHMEL.CZ

HOPS, AS WE KNOW THEM TODAY, BEGAN TO BE ADDED TO BEER IN THE EARLY MIDDLE AGES, AROUND THE 8TH OR 9TH CENTURY. BEFORE THAT, BEER IN EUROPE HAD BEEN FLAVOURED WITH VARIOUS HERBS AND SPICES, SUCH AS A MIXTURE KNOWN AS GRUIT. THESE USUALLY INCLUDED HERBS SUCH AS WORMWOOD, HEATHER, JUNIPER, HYSSOP, MINT OR SAGE. EVERY REGION HAD ITS OWN SPECIFIC TREATMENT THAT GAVE THE BEER ITS CHARACTERISTIC TASTE.

For more information on the volumes and structure of the purchased ingredients, please refer to the [Standards](#) chapter.

VII

PACKAGING

WE ANALYSE THE LIFE CYCLE OF PACKAGING AND LOOK FOR WAYS TO REDUCE ITS CARBON FOOTPRINT. WE ARE REPLACING SINGLE-USE PLASTICS WITH RECYCLATES, REDUCING THE THICKNESS OF PACKAGING FILMS AND INCREASING THE SHARE OF RETURNABLE PACKAGING IN OUR PORTFOLIO. WE STRIVE FOR THE GREATEST POSSIBLE CIRCULATION OF ALL PACKAGING MATERIALS WE USE AT PLZEŇSKÝ PRAZDROJ.

108

LIFE CYCLE OF PACKAGING

Packaging has a significant impact on the environment, which is why we pay great attention to it at Prazdroj. This is an area that is key to planning our corporate strategy, with the environmental footprint of packaging being a decisive criterion for its further development and use in our portfolio. We aim to ensure that all our packaging is reusable or recyclable. We are succeeding in reducing its carbon footprint and waste thanks to that.

110

RETURNABLE PACKAGING

We provide extended producer responsibility in the Czech Republic through EKO-KOM and in Slovakia through Elekos and the Deposit System Administrator.

111

CANS

LIFE CYCLE ANALYSIS

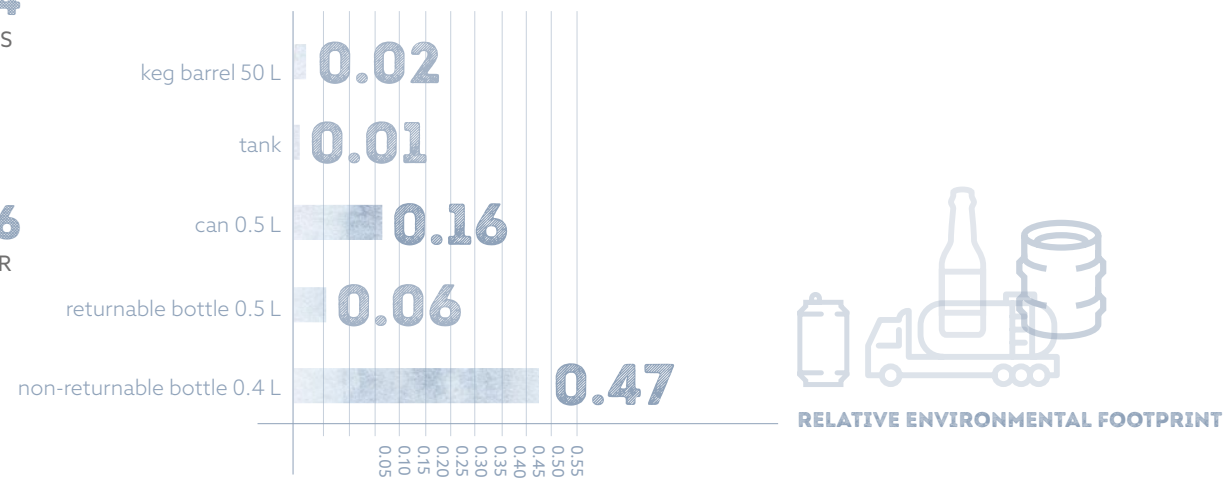

The basis of our packaging policy is life cycle analysis (LCA) of beverage packaging developed in cooperation with experts from the Faculty of Environmental Protection Technology of the University of Chemistry and Technology. This analysis allows us to comprehensively assess the environmental impact of different types of packaging.

114

GLASS

116

PAPER

RELATIVE ENVIRONMENTAL FOOTPRINT

OUR COMMITMENT FOR 2030

ALL OF OUR PRODUCT PACKAGING WILL BE REUSABLE OR RECYCLABLE AND AT LEAST HALF MADE FROM RECYCLED MATERIALS. WE WILL END THE USE OF SINGLE-USE PLASTICS MADE FROM VIRGIN MATERIAL.

REDUCING THE USE OF DISPOSABLE MATERIALS

We stopped selling beer in PET bottles in 2021, but we continue to address the energy intensity of other plastic packaging materials and develop new technologies to replace them or at least reduce their carbon footprint. Packaging made from virgin plastics, i.e. packaging made from new raw materials, is a major environmental burden. Wherever possible, we replace this type of plastic with recycled plastic. Excluding plastic containers that are reused for several years, we have reduced our consumption of virgin plastics by 86% since 2019 and plan to stop using them altogether by 2030.

We only use disposable plastic from virgin material in cases where we have not yet been able to find a suitable alternative that provides the same functionality. These include plastic lids on barrels, bags in mobile tanks and stretch films. For all these components, we are currently developing an alternative to the existing solution. For stretch films used to wrap pallets of bottles or cans, we have successfully reduced the amount of plastic used over the long term. In 2023, we saved 4 tonnes of plastic just by reducing the thickness of the stretch film from 11 to 10 microns. Currently, this is the maximum possible reduction while maintaining strength, flexibility and the ability to protect the packaged product. This saves 18 tonnes of plastic per year compared to standard film.

The reduction in the overall recycling rate for plastics in the Czech Republic in 2023 from 40% to 31% is due to doubling the number of purchased containers with a lower recycle share but a more than ten-year reuse time.

RETURNABLE PACKAGING

Plzeňský Prazdroj's long-term strategy is to increase the share of returnable packaging – bottles, kegs, tanks and cans – in its portfolio.

At the same time, Prazdroj strives for maximum circulation of packaging, i.e. that it is as much as possible returnable or reusable and does not end up in incinerators or landfills.

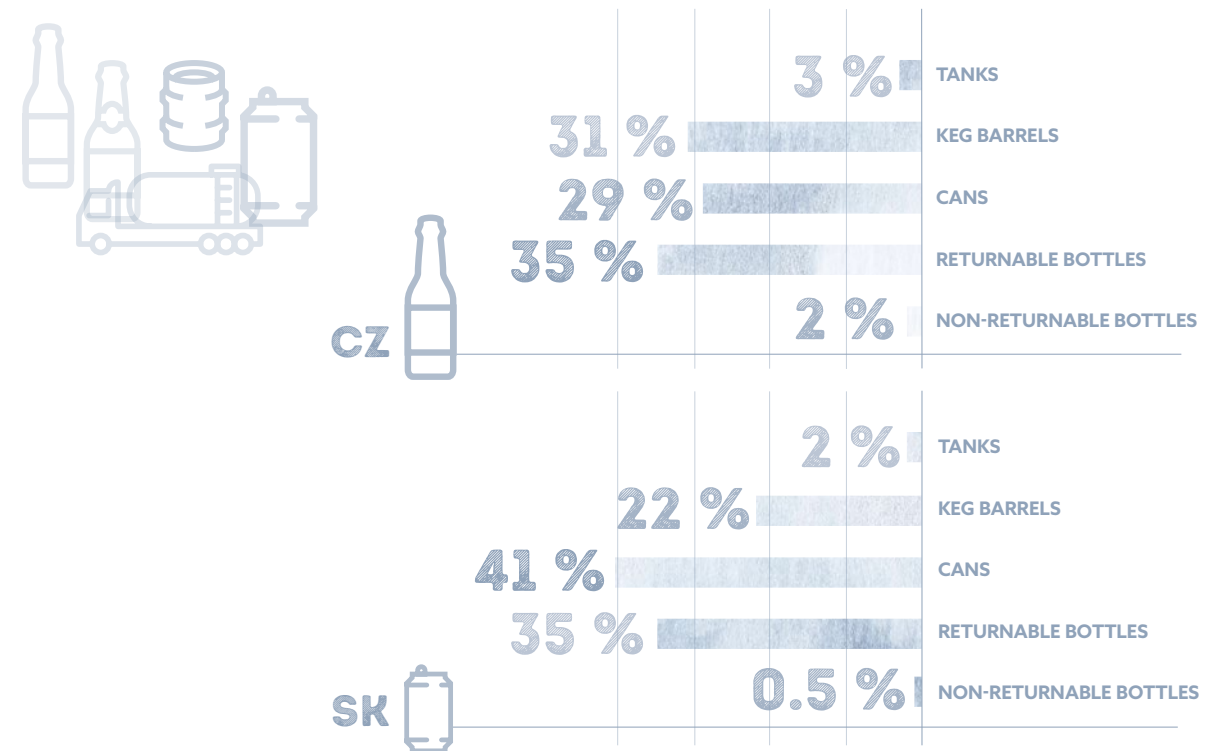

Returnable glass bottles have long been Prazdroj's most sought-after packaging in the Czech Republic, accounting for more than a third of sales.

However, recently there is a growing trend of consumer interest in cans. While in 2017 cans accounted for less than 14 % of all our packaging in the Czech Republic, by 2023 this percentage increased to 29 %. In Slovakia, cans are even the best-selling package type. This trend was also reflected in a 24% year-on-year decline in glass purchases.

IN 2023, WE SOLD 69 % OF OUR PRODUCTS IN THE CZECH REPUBLIC AND 58 % IN SLOVAKIA IN RETURNABLE PACKAGING.

PACKAGING STRUCTURE OF OUR PRODUCTS AND THEIR SHARE IN TOTAL DOMESTIC SALES :

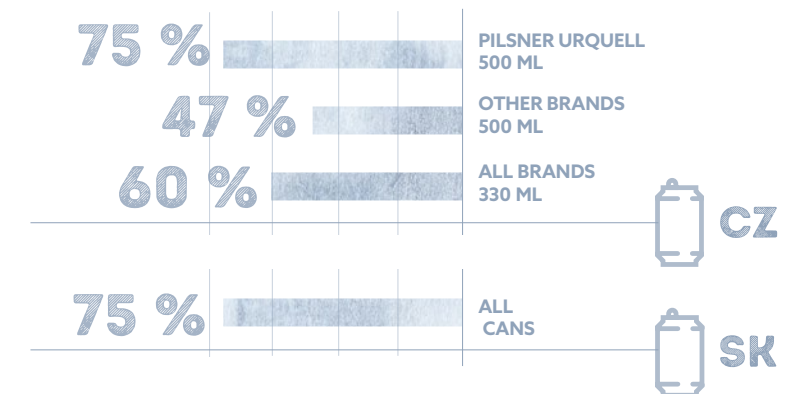

Detailed information can be found in the Standards chapter.

CANS

Cans enjoy great public popularity. In order to minimise their environmental impact, we reduce the thickness of the material used and thus the amount of aluminium in the long term. We are also continually increasing the proportion of recycled material in their production. In the Czech Republic, Pilsner Urquell was the first brand to use cans with a certified 75% recycle content.

SHARE OF RECYCLATE IN THE CAN BODY IN 2023 (%) :

SYMBOLIC CLOSURE OF THE CAN CYCLE IN SLOVAKIA

Thanks to the deposit system for packaging, we had managed to increase the share of recycled aluminium in the body of all new cans in Slovakia to three-quarters by 2023. We started buy-back of the material from the deposit system, which we then recycle into new material for the production of more cans, thus symbolically closing their cycle. We thus fulfilled our plan for 2030.

WE HAVE FULLY CIRCULAR PACKAGING IN SLOVAKIA 7 YEARS EARLIER THAN ORIGINALLY PLANNED.

The much less energy-intensive production of recycled cans has reduced their carbon footprint by 49 %, or 8,472 tonnes of CO₂, and saved 512 tonnes of aluminium.

As collection rates increase, we will continue to increase the proportion of recyclates in packaging. In the long term, we are able to cover more than 85% with material collected under the deposit system without having to buy recyclate from other sources.

www.slovenskozalohuje.sk

IN 2023, MORE THAN 92 % OF CANS IN SLOVAKIA WERE COLLECTED AND RECYCLED.

Source: Annual Report of the Deposit System Administrator

EFFORTS TO INTRODUCE DEPOSITS FOR CANS IN THE CZECH REPUBLIC

Plzeňský Prazdroj also supports the system of deposits for beverage packages in the Czech Republic, where unfortunately most of them end up in incinerators or landfills. That's why, together with other major beverage companies in the Czech Republic, we founded the Package Deposit Initiative in 2021. It is seeking to introduce a nationwide scheme involving all producers and importers of beverages in plastic bottles and cans. Customers would be able to return their PET bottles and cans for which they had to pay a deposit at a wide and convenient network of collection points, for example at grocery stores or petrol stations. For the Czech Republic, this would be a significant step forward in the transition to a circular economy. In 2023, the Ministry of the Environment presented a bill that should allow the introduction of the deposit system in the Czech Republic as early as 2026.

GLASS

98%

is the average bottle return rate

26x

bottle refill rate

8

years is the length of bottle circulation on the market

and Slovakia and Prazdroj has long supported the system of deposits for returnable bottles. We have an agreement with most of the large and medium-sized domestic breweries to exchange bottles that end up in destinations other than their home breweries. This is why more than 98% of our bottles are returned to us. We currently have around 200 million bottles in circulation, they have an actual lifetime of 8 years and we fill a bottle on average twenty-six times during its lifetime. The deposit system saves production of millions of new bottles, while empty bottles and crates are transported from the stores using reverse logistics in the same trucks we use to deliver new goods.

THE FIRST AUTOMATIC SORTING LINE OF RETURNABLE BOTTLES IN THE CZECH REPUBLIC

In the Pilsen brewery we have put into operation an automatic sorting line for returnable glass bottles, which is the only one in the country that can machine-sort bottles of our brands from bottles of other breweries and detect damaged pieces. This step has made the sorting of the millions of empty returnable bottles we collect from shops more efficient and reliable. The sorting has been done manually so far. The investment of almost CZK 50 million allows us to currently control and sort 81,000 beer bottles per hour directly in the crates. Thanks to this automation, our current employees can take other positions within the brewery.

Returnable bottles have a long tradition in the Czech Republic

200,000,000
BOTTLES ARE CURRENTLY IN CIRCULATION
WITH OUR PRODUCTS

BOTTLING LINE

Plzeňský Prazdroj has also put into operation a new fully automated bottling line for glass bottles with volumes of 500 and 330 mL, which is able to fill returnable and non-returnable bottles and pack them into plastic crates or cardboard boxes. The 6,500 m² line with a capacity of up to 60,000 bottles per hour is able to fill up to 900,000 bottles per day.

THE NEW BOTTLING LINE CAN PROCESS UP TO 900,000 BOTTLES PER DAY.

Advanced technologies enable checking at each stage of the bottling process. These include automatic sorting of returnable bottles, inspection of empty bottles after washing, checking the level and cap after filling, and thorough inspection after pasteurisation, including label revision and data readability. The line is controlled by a smart Line Management system, which optimises the line operation, minimises material and energy losses, and interfaces with logistics and planning systems.

The new line is unique in its ability to process 10 different types of bottles and various secondary and tertiary packaging, making it the most comprehensive equipment of its type in the Czech Republic. In addition to increased efficiency, we also expect energy savings and a reduced environmental burden. We are also planning to install a new bottling line in the Velké Popovice brewery.

PAPER

LABELS

Plzeňský Prazdroj records a 77% recycle rate in the Czech Republic and 95% in Slovakia in paper packaging. However, in 2023, the Czech Republic abandoned the use of recycled paper for label production due to complications and a high number of defective pieces.

WE ARE CURRENTLY WORKING INTENSIVELY ON THE DEVELOPMENT OF A NEW LABEL PROTOTYPE THAT IS EXPECTED TO MEET OUR QUALITY STANDARDS. WE CONTINUE TO RECYCLE THE PAPER RETURNED FROM THE BOTTLE WASHING PROCESS.

The decline in recycled paper use in the Czech Republic was also caused by the large volume of Christmas multi-packs and premium packaging, for which a suitable solution with a higher recycled content is not yet available.

THE INTRODUCTION OF RETURNABLE BOTTLES IN THE MID-19TH CENTURY WAS NOT DRIVEN BY ECOLOGICAL MOTIVES OF MANUFACTURERS, BUT BY THE DESIRE TO REDUCE PRODUCTION COSTS. SOME BREWERIES AND MINERAL WATER PRODUCERS IN EUROPE AND NORTH AMERICA INTRODUCED A SYSTEM DEPOSIT FOR RETURNABLE BOTTLES TO ENCOURAGE CONSUMERS TO RETURN BOTTLES.

WE USE A RETURNABLE BOTTLE 26 TIMES ON AVERAGE.

WHAT WILL HAPPEN TO ME?

COWS WILL ENJOY YOU OR MAYBE WE'LL BAKE YOU INTO CRISPY CRACKERS.

VIII WASTE

WE STRIVE TO ENSURE THAT NOT ONE GRAM OF WASTE FROM OUR PRODUCTION ENDS UP IN A LANDFILL. IN SLOVAKIA WE HAVE ALREADY SUCCEEDED, IN THE CZECH REPUBLIC WE ARE APPROACHING THIS GOAL BY LEAPS AND BOUNDS. IN EACH OF OUR BREWERIES, WE IMPLEMENT PROCESSES AND TECHNOLOGIES THAT ALLOW US TO RE-USE WASTE AS INGREDIENT OR ENERGY.

120
WASTE
MANAGEMENT

As part of our responsible business strategy, we at Plzeňský Prazdroj have accepted a commitment to sustainable waste management. The aim is to reduce the amount of waste we produce, recycle as much as possible and manage materials efficiently so that as little waste as possible ends up in landfills.

120
LANDFILL

We follow the **Waste Management Directive** and each individual brewery has a detailed, tailored procedure to meet the requirements of this directive. This procedure sets out the hierarchy of waste management methods, the duties of employees, the method of waste sorting, collection, transport, storage, disposal and record keeping.

123

FROM PRODUCTION

OUR COMMITMENT FOR 2025

NO WASTE FROM OUR BREWERIES WILL END UP IN A LANDFILL.

Our waste management is based on the waste hierarchy. We use methods that minimise impacts on the environment and make maximum use of our waste. Brewery, distribution centre and technical service managers are responsible for this area. They introduce new processes and technologies that help us recover valuable materials. Over the last year, we have managed to reduce the amount of landfilled material in the Czech Republic by almost half, and in Slovakia we have even reached zero.

All waste from our production in Šariš is reused or recycled

THE ŠARIŠ BREWERY HAS ELIMINATED LANDFILLING COMPLETELY, ALL GENERATED WASTE IS REUSED

The Šariš Brewery has reached a significant milestone in sustainability. All waste from its production is reused, recycled or provided for energy recovery. The company achieved this goal **two years earlier** than originally planned. Thanks to gradual modernisation and an efficient waste management system, the brewery has avoided landfill, while by-products of production, or secondary materials such as brewery grinds and yeast, are used as animal feed. Secondary raw materials accounted for 95% of the 19,000 tonnes of waste produced by the Šariš Brewery in 2023. Other materials such as glass and paper, labels and plastic or metal packaging are recycled. The waste from beer filtration is composted and wooden packages are used for energy recovery.

The Šariš Brewery has the best results in the area of waste management within the Plzeňský Prazdroj Group thanks to high environmental awareness and diligent waste separation by its employees.

Striving for waste prevention and reuse is behind the brewery's success. **We have newly established cooperation with a company that operates a waste-to-energy facility.** This cooperation guarantees reuse for energy generation of all that we are unable to reuse ourselves, including waste that ended up in landfills a year earlier.

0 TONNES TOWARDS ZERO LANDFILL IN OTHER BREWERIES

We also want to achieve zero landfill in other breweries, so we are focusing on reducing the production of mixed packaging and municipal waste. On the premises of our breweries, compression containers for paper and plastic packaging residues and containers for sorted waste help us significantly.

WASTE FROM PRODUCTION

SECONDARY MATERIALS:

2022: 192,445 tonnes
2023: **190,545 tonnes**

OTHER WASTE:

2022: 12,010 tonnes
2023: **12,091 tonnes**

HAZARDOUS WASTE:

2022: 75 tonnes
2023: **29 tonnes**

61 TONNES WE HAVE MANAGED TO REDUCE HAZARDOUS WASTE BY THAT MUCH IN 2023 THROUGH INNOVATION AND REPLACING OLD EQUIPMENT WITH SAFER ALTERNATIVES.

WASTE TREATMENT WITHOUT BY-PRODUCTS:

3% landfill

WASTE TREATMENT WITHOUT BY-PRODUCTS:

SK
97% recycling
3% energy recovery
0% landfill

Detailed information can be found in the [Standards](#) chapter.

WE ARE INTERESTED IN HOW OUR SUPPLIERS ARE DOING

We also monitor waste recovery, recycling and disposal by suppliers and contractors. When selecting suppliers, we give preference to companies that reuse their waste and secondary materials and prefer their material recovery to incineration or landfilling.

RETURNABLE GLASS AND CUPS AT FESTIVALS

When selling tap beer at summer festivals we increasingly use returnable washable cups or glasses. In 2023, the number of events with returnable cups increased by more than a quarter to 66% in the Czech Republic and by more than a third to 16% in Slovakia. As a result, we distributed 1.44 million fewer disposable cups compared to the previous year. When event organizers do not allow returnable glass or cups, we choose disposable cups made of 100% recycled plastic. At the same time, we are looking for solutions to replace recycled plastic cups with a suitable alternative that retains their properties and has an even lower carbon footprint.

recycled plastic is contained in our disposable cups

WE HAVE REDUCED THE NUMBER OF DISPOSABLE CUPS AT FESTIVALS BY 1.44 MILLION IN 2023.

SECONDARY MATERIALS FROM PRODUCTION

In the brewing industry we mainly process natural materials. As a result, most of our waste is also natural and we therefore have the opportunity to reuse it. Thanks to long-term efforts, we are now able to reuse all secondary materials generated by our production. For example, waste from malting is becoming an important source of livestock feed, with mainly yeast and brewers' mash valued by farm animal breeders for their high protein, fibre and calcium content. However, farmers can also use sewage sludge as a fertiliser and waste diatomaceous earth from filters, which is ploughed in to lighten and aerate the soil in reclaimed areas.

We enter into long-term contracts with malt waste buyers and share weekly brewing schedules with them to make the deliveries to them as efficient as possible. Our customers then supply the secondary materials directly to farmers and agricultural cooperatives. Thanks to that, some of them finally end up with our barley or hop suppliers.

The most important by-product in the production of our beer is **spent grains**, produced after barley malt boiling and wort straining. Spent grains mainly consist of grain husks removed during milling and residual starch. This by-product has long served as a popular and highly nutritious animal feed.

Plzeňský Prazdroj once decided to also use it in another way, and so cooperation with the Zemanka Bio Bakery was established, now baking beer crackers from our spent grains for five years already. In 2023, 109 tonnes of spent grains were used in their production.

AS FEED WE USED

ATTENTION, IN THE CASE OF HORSES, WHEN PRESENT IN THE FEED MIX IT IS CONSIDERED DOPING.

THE MOST VALUABLE RESIDUE FROM MALTING BARLEY IS MALT FLOWER. THESE ARE THE SPROUTS AND ROOTS THAT HAVE GROWN DURING THE GERMINATION OF THE BARLEY BEFORE THE WHOLE PROCESS IS COMPLETED BY DRYING TO REMOVE EXCESS MOISTURE FROM THE GERMINATED GRAINS. MALT FLOWER IS FULL OF VITAMINS, MINERALS AND ENZYMES. IT IS USED TO FLAVOUR CATTLE FEED OR TO PRODUCE MEDICINES.

Details on waste streams by material can be found in the [Standards](#) chapter.

PHYSICAL, MENTAL AND SOCIAL WELL-BEING IS IMPORTANT TO ME.

WELL-BEING HAS A FIRM PLACE IN PLZEŇSKÝ PRAZDROJ'S STRATEGY

IX

PEOPLE

WE KNOW THAT OUR PEOPLE AND THEIR DIVERSITY GIVE PLZEŇSKÝ PRAZDROJ ITS STRENGTH. THAT'S WHY WE PLACE GREAT EMPHASIS ON DIVERSITY, INCLUSION AND A FAIR APPROACH TO PAY. WE WANT TO CREATE AN ENVIRONMENT WHERE PEOPLE ARE HAPPY AND CAN FULLY REALISE THEIR POTENTIAL. WE SUPPORT THEIR PROFESSIONAL DEVELOPMENT AND PERSONAL GROWTH, AS WELL AS ENGAGEMENT IN THEIR COMMUNITY.

130
SATISFACTION
SURVEY

We believe that Prazdroj is so strong thanks to the diversity of our employees, who put different perspectives and skills into play. It is they who contribute to the development and growth of our company most.

132
DIVERSITY
AND INCLUSION

We make sure that everyone feels respected and motivated, and that in turn allows us to create an environment where people are happy and can fully realise their potential. We support their career development as well as their personal growth and community involvement. Every year we conduct a survey to find out how satisfied they are, so that we can continue to improve and move Prazdroj forward together.

135
EDUCATION

138
WELL-BEING

In 2023, as before, the satisfaction survey was again conducted across the entire Asahi Europe & International Group. The satisfaction rate was 89 % in the Czech Republic and 90 % in Slovakia.

DIVERSITY AND INCLUSION

At Prazdroj, we are committed to treating all employees equally, regardless of their differences, and we aim at creating a work environment that is based on respect and equality and where everyone can develop their full potential. We strive to apply the principles of diversity and inclusion not only in our breweries and offices, but also in the places where our beverages are served.

We are a signatory of the European Diversity Charter (a voluntary initiative of companies and organisations founded to promote workplace inclusion and diversity) and the [Diversity Charter in the Czech Republic and Slovakia](#), where we are also ambassadors.

At Prazdroj, we have a steering committee responsible for diversity and inclusion, whose strategic management is provided by members of top management, for whom this area is a top priority. The strategy implementation is then ensured by a company-wide Diversity Task Force including representatives of different departments, which ensures that the specific needs of all individual parts of the company are reflected. Cooperation and exchange of experience in the areas of diversity, equality and inclusion is facilitated by our membership of the D&I Shapers platform. This platform helps connect and coordinate companies' efforts in the field of gender diversity and inclusion, as well as in other areas.

As part of our support for diversity and inclusion, we also engage with the LGBTQ+ community. A group from Plzeňský Prazdroj also took part in the Prague Pride procession in 2023. Our experimental brewery, Proud, joined the activities with beer in special rainbow cans and with its non-alcoholic Proovan beverage.

NEW GUIDELINE: EQUAL TREATMENT AND PROTECTION AGAINST DISCRIMINATION

Diversity and inclusion are strategic priorities for our company. As part of the international LEAD Network initiative, we are committed to promoting gender diversity and inclusion in the European retail and packaged consumer goods sector. The most important aspects of our commitments are also defined by the new guideline entitled **Equal Treatment and Protection against Discrimination** and adopted by Asahi Europe & International in 2023. The Directive clearly defines unacceptable behaviour such as harassment, discrimination, victimisation, bullying and mobbing, and sets out the roles and responsibilities of employees and managers in preventing these situations and dealing with them, should they occur.

LEAD NETWORK

The Proud mini brewery joined the Pink Boots Collaboration Brew Day for a third time by brewing a special Raise Your Glass APA beer based on a recipe by our brewer Lenka Straková. The event is held on the occasion of International Women's Day to support and celebrate women in the brewing industry, symbolized by pink boots.

COLLECTIVE BARGAINING AGREEMENT AND OTHER GUIDELINES

The new collective agreement, which came into force on 1 January 2023, mainly regulates the working, wage and social conditions and claims of employees at Plzeňský Prazdroj Czech and Plzeňský Prazdroj Slovakia. It was signed by representatives of the employer and the trade unions and was valid until 31 December 2023. The agreement specifies benefits for all employees, whether full-time or part-time, who are on permanent or fixed-term employment contracts with a contract term length of more than one year. This includes pension scheme and life insurance contributions, five weeks' holiday and allowances for health, sport, culture, recreation, transport and education. In addition, our employees can also take advantage of product discounts and promo events offered by our partner companies.

The internal regulations that formulate the basic principles of employee remuneration have been discussed with the trade unions. At the same time, a four-member committee has been appointed comprising the CEO, the CFO, the HR Director and management representatives responsible for remunerations and benefits. This committee makes decisions on strategic issues and outcomes that will be reflected in employee remuneration. Key aspects are consulted with the company management. Employee remuneration is based on a performance evaluation system according to **Korn Ferry talent assessment and development methodology**, consulted on the level of Asahi Europe & International for senior positions.

Another guideline we follow is the **Compensation and Employee Benefits Policy**. This guideline of Prazdroj sets out the procedures and rules for determination of the form and amount of wages and other employee benefits. The guideline further ensures that these practices are consistent with our compensation and benefits strategy while complying with applicable legislation, the collective bargaining agreement and other regulations.

EQUAL SALARY: A FAIR REMUNERATION SYSTEM

The emphasis on equal access and equal standards regardless of gender is a fixed part of our corporate philosophy. A key role in this is played by our system of employee development and their remuneration. To make sure we pay fair wages to our employees, we have undergone an independent audit as part of our **Equal Salary certification**.

As part of the audit, the Swiss Equal Salary Foundation together with the audit firm PwC examined our processes, interviewed employees and analysed remuneration data in detail. In early 2023, we received the certification confirming that the wages we pay to men and women are in line with best employer practices and that we reward employees purely on the basis of their qualifications, skills and contribution they bring to the company. The certificate also guarantees that our **gender pay gap does not exceed 5%**.

Prazdroj is one of four companies in the Czech Republic and one of 150 companies in the world that have won this prestigious certificate. This success underlines our long-standing commitment to creating a fair and equal working environment, but also places us among the world leaders in fair pay. We also promote diversity and involvement of women in the company by helping our female employees combine parenthood and career.

<5 %
is the difference in the wages we pay to men and women

EQUAL SALARY FOUNDATION

WE KEEP IN TOUCH WITH EMPLOYEES ON PARENTAL LEAVE

We strive to make our employees feel part of the company even during their maternity and parental leave. The **Stay in Touch** program allows them to stay up-to-date on company news thanks to a company newsletter, or participate in webinars and online training courses. We have a special Facebook group for parents and they can also take advantage of company benefits such as Christmas allowances, preventative healthcare and holiday vouchers. We support alignment of their job- and family-related responsibilities through part-time work and flexible working hours. If they decide to return to work before their child is three years old, we provide an allowance for pre-school childcare.

EDUCATION

For us, training and development represent a major investment in our employees. We have created a system where our employees manage the development of their own competencies and skills themselves, with their managers acting as their coaches. Natural experience and knowledge sharing is organised through workshops and expert discussions.

WE SHARE INFORMATION ABOUT EDUCATIONAL ACTIVITIES AND THEIR TOPICS THROUGH OUR TO HEALTH AND DEVELOPMENT! NEWSLETTER.

We follow the **Employee Training and Development** guideline, which sets out the principles and procedures for providing training and development activities at Prazdroj. We strive to provide employees with the necessary expertise, skills and abilities for their current or future positions in accordance with the needs of the company.

70 %
on-the-job training

We follow the 70-20-10 principle, which includes 70% on-the-job training, 20% mentoring and coaching, and 10% formal training. The development of our employees is based on multiple pillars: **statutory and mandatory training, onboarding programs** for newcomers and advanced development to meet individual needs and company goals.

119

newcomers were welcomed in Prazdroj

All new employees complete the onboarding programme "Welcome to Prazdroj", which is part of the Academy CZ & SK and is also available in digital format. In 2023, 119 newcomers went through it. All mandatory training courses are interactive and include practical demonstrations. Employees can further develop their potential within the framework of their individual development plans (IDP). The range of activities is based on the most frequently requested educational areas.

1127

people attended 36 webinars

Digital development, well-being, mental health and language learning: In this area, we organised 36 webinars attended by 1,127 people. For online education, we use the GoodHabitZ learning platform, which offers up to 150 courses. A total of 100 people actively worked on their development using this platform. Our employees were also zealous attendees of our language courses, through which our company supported 170 male and female staff members.

Diversity and inclusion: We are also focused on raising our employees' awareness of social issues such as diversity and inclusion, as well as leadership and team development. These topics were also featured on our "Inspiration" show, where our Director of Corporate Relations interviewed interesting guests live, shared their stories and discussed current trends in business.

207

company leaders attended diversity and inclusion workshops

This programme was followed by a new format "Purpose Talk", which aims to reflect on the deeper purpose of business, which goes beyond simply generating profit and includes, for example, a positive impact on society, the environment or a specific community. Through these conversations, we want to inspire and motivate employees to identify themselves with our corporate values and actively apply them in their work.

IN 2023, 837 PROFESSIONAL AND STATUTORY TRAINING COURSES WERE HELD, TOTALLING 16,779 HOURS OF TRAINING.

232

participants in the Leadership program

Managerial skills: Employees showed great interest in the Leadership development programme, which was attended by 232 colleagues, and the Mentoring programme, which was open to 57 participants. An important part of skills training is represented by the comprehensive PRO-LEAD project management programme, which was attended by 61 employees. The aim is to train as many people as possible who participate in, commission or lead projects.

Technical skills: We also provide very specific and specialized professional training courses. These include MiBi microbiology training for production workers, the Logistics Academy and SixSigma. These are intended for senior positions in production who work on their own process efficiency projects (reduction of beer losses, etc.).

19

HOURS OF TRAINING WERE COVERED ON AVERAGE BY EACH PRAZDROJ EMPLOYEE IN THE CZECH REPUBLIC AND SLOVAKIA IN 2023. THIS IS ALMOST 20% MORE THAN IN THE PREVIOUS YEAR.

WELL-BEING

Physical, mental and social well-being has a firm place in the strategy of Plzeňský Prazdroj, because the overall satisfaction of employees fundamentally affects the company's performance. As part of the **To Health! project**, employees have the opportunity to benefit from various activities and services focused on all three of the above areas.

APPROX.
600

participants took part in sporting activities across regions

In body care, for example, we focus on a healthy lifestyle through our webinars. For example, how to cope with the negative effects of sedentary work, poor quality sleep or lack of physical activity. This is the sixth year we have participated in the **Bike to Work!** challenge and the second year of our participation in the **10,000 Steps Challenge**. We organize badminton and volleyball tournaments for employees, and we participate in running and other sporting events together. The Birell Grand Prix, for example, is designed for fans of running. Approximately 600 participants attended dozens of sporting activities across all locations.

Other activities focus on enhancing psychological well-being. We are a member of the **coalition of companies of the Mental Health League**. Thanks to this our male and female colleagues can participate in online conversations with experts working in different areas of mental health every month.

To facilitate a work-life balance, we allow employees to work from home if the nature of their work so permits. The terms and conditions are set out in the **Temporary Work from Home Directive** and the **Procedure for the Home Office OHS Management Directive**.

YOU CAN COUNT ON US

As part of the assistance programme called **You can count on us**, employees and their family members have access to psychological, financial or legal counselling. The helpline is available 24 hours a day, consultations are completely anonymous and take place in Czech for Czech Prazdroj and in Slovak for Slovak Prazdroj.

ULÉKAŘE.CZ

The ulékaře.cz assistance programme provides people from Prazdroj with an opportunity to have online consultations with physicians and helps them arrange a personal examination if needed.

VOLUNTEERING

All our employees on employment contracts can dedicate two working days a year to volunteer activities. In 2023, we organized 31 volunteer activities in which a total of 419 employees participated. These included cleaning up around the brewery, tree planting, revitalization of the landscape, work in a hop field, organization of material collections for people in need, and taking care of seniors.

305

volunteers in the Czech Republic

114

DEVELOPMENT OF AND SUPPORT FOR YOUNG TALENTS

GOGRADUATES

The GoGraduates project is a programme aimed at developing of future leaders. The participants in this two-year programme are given an opportunity to complete internships in a variety of positions tailored to their interests and career plans. The program also includes international rotation of employees allowing our people to take an internship abroad at an Asahi Group partner brewery. Many graduates of the programme already successfully use their experience in key management positions. In 2023, we had 12 trainees in the GoGraduates programme.

INTERNSHIPS

Every year our company opens positions for interns. Yearly internships are scheduled for one whole year, 20 hours per week. Summer internships, which take place during the summer holidays, are full-time work. The internships include projects that significantly contribute to Prazdroj operations. Interns present their results directly to the company management. In 2023, the yearly internships included 20 students and the summer internships were used by 4 interns.

COOPERATION WITH SCHOOLS

We actively cooperate with secondary schools and universities. We organise lectures, workshops, open days and engage in long-term practical projects for students. We also provide consultations to students working on their bachelor and master theses. Our long-term partners include the Prague University of Economics and Business, the Prague University of Chemistry and Technology, the Technical University of Ostrava, the Slovak Technical College, the Slovak University of Agriculture in Nitra, the Bratislava University of Economics and others. We also participate in job fairs and conferences such as Youth-Speak Forum and Big Step.

HEALTH AND SAFETY FIRST

SAFETY TRAINING

At Prazdroj, we follow the Occupational Health and Safety and Fire Protection Directive and the Management of Chemical Substances Directive.

All of our employees and contractors have received occupational health and safety training, which is mandated by legislation and focuses on identified workplace-specific risks. The staff of the distribution centres and technical service department, in cooperation with an external consultant in this area, familiarized themselves with the themes of environment protection, occupational health and safety and fire protection. In the year under review, we paid great attention to the work of external companies, especially in operations, where we have a work permit system in place for them.

In 2023, we also opened a new I care training programme. This is an application where identified risks of a technical nature are entered, such as missing protective barriers, non-compliances in electrical installations, stairs, buildings, or incorrect work procedures, etc. The training was attended by 36 members of the Plzeňský Prazdroj management. Employees also receive regular training for drivers and first aid training.

Detailed information can be found in the [Standards](#) chapter.

IN 2023, THE NUMBER AND SEVERITY OF INJURIES WAS REDUCED SIGNIFICANTLY. WE RECORDED FIVE ACCIDENTS REQUIRING TEMPORARY ABSENCE FROM WORK IN THE CZECH REPUBLIC, AND NO SUCH ACCIDENT IN SLOVAKIA. COMPARED TO 2022, THE INJURY RATE WAS REDUCED BY A WHOLE 50 %.

The management of occupational health, safety and fire protection in the Plzeňský Prazdroj Group falls under the Technical Director's department and is internally referred to as the Safety Management System (SMS). In 2023, safety was targeted by a total of 211 internal audit inspections in the Czech Republic and 125 in Slovakia. Significant projects included the Job Risk Analysis (JRA) designed for teams tasked with identifying and addressing potential workplace hazards in order to prevent accidents and injuries. Another important aspect is the engagement all our employees, who are involved in a range of activities to promote safety. In 2023 alone, they conducted more than 7,700 safety observations and recorded over 800 "near misses". Thanks to these activities, we can boast of long-term success in eliminating potential risks and introducing new measures that are to reduce the number of occupational injuries.

In 2023, our main focus was on pedestrian protection in breweries and distribution centres, the installation of barriers and completely new signage. We also implemented new requirements of Asahi Europe & International's internal guidelines, for example on working at heights, and analysed the risks faced by our sales teams directly at their workplaces.

36 members of the management of Plzeňský Prazdroj completed the I care programme

A TOTAL OF 82 EMPLOYEES ATTENDED A SPECIAL SAFETY KNOWLEDGE AND SKILLS DEVELOPMENT PROGRAMME, THE SAFETY CAMPS

EMERGENCY RESPONSE TRAINING

As in previous years, we held a series of practical briefings in our breweries in 2023. For example, an ammonia leak disposal drill took place at the Pilsen Brewery, attended by fire protection units and the crisis staff of the Plzeň Municipal Council. The exercise was based on simulated uncontrollable leakage of this dangerous substance from the brewery. The main objective of the exercise was to test cooperation between the fire protection units and the personnel operating the cooling technology in the brewery. At the same time, our staff readiness to respond to emergencies, including evacuation and communication security, was tested. The exercise also included activation of the alarm system and sirens in the brewery area, which informed the employees and the surrounding area about the ongoing exercise.

ETHICS

Honest and ethical behaviour, both within the company and in relations with suppliers and customers, is the basis for building the reputation of Plzeňský Prazdroj and the entire Asahi Group. The principles of such conduct are set out in the **Company's Ethics** guideline. The guideline is binding for all male and female employees, including seasonal workers. They were all familiarized with it during their onboarding process and their knowledge is reinforced annually through the "Company Ethics" training.

Employees and third parties can report unethical conduct by phone or through an online form to an anonymous ethics hotline operated by an external contractor. All these reports are investigated by an independent team. Employees may also report misconduct to their supervisor, a member of the Ethics Committee, the Ethics Resolution Team or the Ethics Officer. The whole process is described in detail in a specific whistleblowing guideline.

IN 2023, WE DID NOT RECORD ANY COMPLAINTS CONCERNING UNETHICAL BEHAVIOR.

PRAZDROJ STARS

We want our employees to be committed, proactive and responsible, and to support and motivate each other. To encourage this behaviour, we introduced the possibility to nominate colleagues or teams for the Prazdroj Stars awards in March 2022. The award is granted to employees who have made a significant contribution to business results or to improvement of the corporate environment. Nominations are judged monthly by a panel of senior managers and the award is presented to the winner by the CEO. The awarded individuals and teams advance to the next round, where the management selects a project to represent Prazdroj in the global Asahi Group Philosophy Awards competition. In 2023, Prazdroj was represented by the FOR HOPS project, which won the Audience Award in the world finals.

AND OF COURSE, WE CAN'T FORGET THE FREE BEER BENEFIT.

THE PLZEN BREWERY HAS ALWAYS PROVIDED ITS EMPLOYEES WITH BETTER WORKING CONDITIONS THAN USUAL. AS FAR BACK AS THE LATE 19TH CENTURY, IT INTRODUCED THE EIGHT-HOUR WORKING DAY, HAD ITS OWN SICKNESS FUND TO PROVIDE HEALTH CARE FOR EMPLOYEES AND THEIR FAMILIES, AND OFFERED PENSION INSURANCE AND HOUSING ALLOWANCES. THE COMPANY EVEN BUILT APARTMENT BUILDINGS FOR ITS EMPLOYEES.

ONE MORE NON-ALCOHOLIC, PLEASE!
NO PROBLEM. THERE IS SOMETHING FOR EVERYONE'S TASTE IN OUR PORTFOLIO.

X

RESPONSIBILITY

WE DO NOT WANT PEOPLE TO DRINK MORE, WE WANT TO TEACH THEM TO DRINK BETTER. WE EXPAND OUR PORTFOLIO OF NON-ALCOHOLIC BEERS, WE WORK IN THE FIELD OF EDUCATION, AND WE FAIRLY INFORM CONSUMERS ABOUT THE COMPOSITION OF OUR PRODUCTS. WE ARE CONSISTENT IN OUR ADHERENCE TO THE CODE OF CONDUCT AND OUR INTERNATIONAL COMMITMENTS. WE ALSO BEHAVE RESPONSIBLY IN OUR MARKETING COMMUNICATIONS.

156
BREAKING DOWN
PREJUDICES

As a leading beer producer in the Czech Republic and Slovakia, we are committed not only to producing the highest quality beer, but also to promoting responsible and moderate alcohol consumption. We are actively involved in education and a number of different initiatives in the area of excessive drinking prevention.

In 2023, we launched a new project called **Responsible Drinking Ambassador**, in which all Prazdroj employees can participate and together contribute to responsible consumption of our products. Those interested will complete a course that will provide them with important knowledge and tools needed to recognize the signs of alcohol abuse as well as information about its negative impact on health. Prevention of underage drinking is included.

As ambassadors, employees take an active role in promoting healthier lifestyles, and the course provides them with the necessary skills to have sensitive conversations with colleagues, friends or family members who may need help. In addition to preventive programmes, the company's main priority is self-regulation, which at Plzeňský Prazdroj is one of the strictest in the industry.

OUR COMMITMENT FOR 2030

WE WILL INCREASE THE SHARE OF SOFT DRINKS IN OUR OFFER TO 25%.

EDUCATION AND AWARENESS

We have a sophisticated system of education about alcohol and responsible drinking for our people. We train and educate not only all our employees, but also cooperating agencies, business partners and other stakeholders. Every employee of Plzeňský Prazdroj undergoes Alcohol Alphabet training focused on responsible drinking. In addition, marketing staff receive special training on **Responsible Marketing**.

100 %

of Prazdroj employees have gone through the Alcohol Alphabet

WE ARE CONTINUOUSLY EXPANDING OUR PORTFOLIO OF NON-ALCOHOLIC BRANDS TO OFFER NEW OPTIONS TO CONSUMERS IN LINE WITH OUR STRATEGY.

COMMERCIAL COMMUNICATIONS

We take a responsible approach to marketing and regularly evaluate the impact of the self-regulatory rules we follow. Self-regulation allows us to react quickly to changing trends and requires no investment from public budgets.

A sophisticated internal Code of Conduct compliance system controls all commercial communications, which are approved by our internal **Accountability Committee**. Compliance with the External Code is then ensured by the Advertising Council representative on the Committee. In 2023, its members assessed over 580 proposals for the Czech and Slovak markets.

In 2023, 99.8% of our TV ads met the 75 : 25 rule (at least 75% of the target audience of the programme in which our advert was shown was over 18 years old). In our print, radio and digital communications, this rule was met by all contributions without exception.

99.8 %

of our TV ads in 2023 met the rule of 75 : 25

WE ADHERE TO OUR CODE OF COMMERCIAL COMMUNICATION, WHICH CONTAINS A NUMBER OF STRICT RULES THAT GO BEYOND THE LEGAL REQUIREMENTS.

In addition, Plzeňský Prazdroj's online communication is governed by the Digital Guiding Principles, which include, among other things, important rules regarding website and social network content, not only the content in our own channels, but also that created in cooperation with influencers who commit to our principles. Compliance with digital communication rules is regularly audited at the level of Asahi, our parent company.

DIGITAL GUIDING PRINCIPLES

PREVENTION OF UNDERAGE DRINKING

Although the legal age for alcohol consumption in our country is 18, some young people start drinking at high school or even at a younger age. This can lead to a number of serious problems. Moreover, people in the Czech Republic and Slovakia take a very tolerant attitude towards underage drinking.

18!

RESPEKTUJ18.cz

Our goal is to change this public attitude. We are therefore involved in a number of projects that highlight the problem and seek to address it. One of these is the **Respect 18** contact campaign, now in its eleventh year, which is aimed at preventing underage drinking. The project is implemented in cooperation with the Magistrate of the City of Plzen, the Centre for Drug Prevention and Therapy, the Podanéruce Association, the Moravian-Silesian Region and the Prague 13 and Prague 14 city quarters. In 2023, we visited six different events in the Czech Republic and addressed more than **17,000 adults** through an entertaining and educational programme at our stand.

We also actively communicate the topic on social media and online, where people can share their experience and ask questions, and have them answered by experts. Through the **Myths and Facts** campaign on the Let's Talk About It Instagram profile, we have addressed over **87,000 people**.

18!

RESPEKTUJ18.sk

In Slovakia, we presented our project **Respect 18**, on which we cooperate with experts from OZ Prima, at six events for families with children in 2023. More than **6,000 adults** were addressed by the contact campaign. Together with Barbara Kuchárová, psychologist and project sponsor, we continue to spread awareness over social media, where we use educational videos to open up the topic of how to talk about alcohol with teenage children. More than **91,000 people** actively participated in the project through the contact or online campaign.

IN 2023, WE DID NOT RECEIVE ANY COMPLAINTS ABOUT OUR ADVERTISING IN THE CZECH REPUBLIC OR SLOVAKIA.

napivosrozumem.cz

promileinfo.sk

DRINK SENSIBLY

AND OTHER PREVENTION PROGRAMS

We also promote moderate alcohol consumption through our websites napivosrozumem.cz in the Czech Republic and promileinfo.sk in Slovakia, which also includes a calculator from the non-profit organisation Sananim. It allows people to calculate how long after drinking alcohol they can safely start driving. In line with our "Proud To Be Clear" commitment, we are raising consumer awareness by publishing a full list of nutritional values and alcohol content not only on the packaging of our products themselves, but also on this website in the Beer & Nutrition section.

During the summer months, we supported free expert advice and breath testing offered by Sananim experts at the Promile INFO booth at eight summer festivals in the Czech Republic. Nearly 6,000 visitors used this service.

In Slovakia, the Slovak Beer and Malt Producers Association promotes responsible behaviour of car drivers, bikers, cyclists and scooter riders. As part of the traffic prevention campaign **Be Sensible**, implemented by the Slovak Police and the Slovak Road Safety Organisation (BECEP), more than 40,000 drivers were checked and those who were found to be acting responsibly were rewarded with a non-alcoholic beer. A year-round accountability campaign was running on social media, reaching more than 923,000 people on the Priatelia Piva Facebook page and more than 1,362,900 people on the Polícia SR Facebook page.

OUR INTERNATIONAL COMMITMENTS

We continue to fulfil our international commitments in the area of responsible communication of our products, prevention of underage drinking and disclosure of information on the nutritional values of our products, which Plzeňský Prazdroj has committed to in the Czech Republic and Slovakia as a member of the Asahi Group.

OUR COMMITMENT IN UNDERAGE DRINKING PREVENTION

with the International Alliance for Responsible Drinking (IARD)

3. We will strengthen the current measures to prevent minors from accessing our content in the digital environment.

All our alcohol brand channels include an age verification mechanism for access by people over 18 years of age only. Our channels also meet the requirements defined by the Digital Guiding Principles commitment.

4. We will invite retailers, wholesalers and distributors to work with us on the implementation of the most effective consumer age verification procedures.

We are succeeding in this goal through our involvement in the [Don't Be Angry, Prove Your Age](#) project.

5. We will invite retailers from e-commerce and delivery services to join us in developing global standards for online sales of alcohol.

We are actively working towards this goal.

1. By 2024, we will have a clear symbol on all our alcoholic products or a verbal warning that the products are not suitable for minors.

2. We will not even target youth and children with our marketing communications of non-alcoholic variants of our alcoholic products.

We already succeeded in meeting this objective in 2023 through the training of our employees and agencies and consistent application of the rules of the Code of Commercial Communication, which contains these provisions.

In the coming period, we will also focus on delivering on the points within the IARD's International Commitment, in particular as concerns the introduction of clear symbols on all our alcohol-containing products warning at-risk groups of minors to avoid drinking alcohol. As part of responsible marketing, we also support the initiative of the International Alliance for Responsible Drinking (IARD) called **Influencer Pledge**. This commitment, which we share with our partners and influencers, ensures that the content associated with our brands promotes responsible drinking, addresses adults only and adheres to the highest ethical standards. In order to expand the standards of responsible alcohol sales, we also focus on working with our retail, supermarket chain and e-commerce customers.

By 2023, 88 % of our alcohol beverage packages already met this commitment by displaying responsibility icons.

112,285

As a member of the Czech Brewery and Malthouse Association, we also actively support events focused on alcohol prevention behind the steering wheel through the Driving, Drinking Non-Alcoholic Beer project. In 2023, 112,285 people were addressed in this way in cooperation with the Police of the Czech Republic and the Czech Organisation for road safety (BESIP).

144,311

people were actively involved in our preventive programmes in the Czech Republic

83,557

people participated in Slovakia

OUR COMMITMENT TO INFORM CONSUMERS "PROUD TO BE CLEAR"

We list the alcohol volume and energy content (calorific values) of our alcoholic and non-alcoholic products on all bottles and cans sold in the European Union. In addition, the entire nutritional profile (the Big 7) is shown on the secondary and tertiary packaging. All alcohol-containing products in our portfolio also carry at least one of three voluntary labels promoting responsible behaviour on their packaging.

Proud To Be Clear

In 2023, Birell introduced new limited-edition radlers with Mango & Lemon, Blueberry & Cranberry, Tangerine & Yuzu, Pear & Quince and Apple & Plum flavours. All variants have a reduced sugar content and, like all Birell drinks, are made without the use of artificial sweeteners, colours or preservatives.

BIRELL IS OFTEN THE FIRST CHOICE FOR MANY ADULT CONSUMERS LOOKING FOR A REFRESHING DRINK NOT ONLY WHILE DRIVING, BUT ALSO WHILE PLAYING SPORTS OR SITTING WITH FRIENDS.

NON-ALCOHOLIC DRINKS

SHARE OF NON-ALCOHOLIC BEVERAGES IN THE PRAZDROJ PRODUCT PORTFOLIO IN 2023

The sales volumes of our non-alcoholic portfolio products remained the same in both markets as in the previous year. The slight decline in the share in Slovakia was due to the recovery of the traditional beer market after the covid hiatus.

BREAKING DOWN PREJUDICES

ON SOFT DRINKS

At Prazdroj, we are committed to responsible drinking, and one of our goals is to oppose prejudices against people who opt for non-alcoholic variants of adult alcoholic beverages. In the non-alcoholic Birell campaign, which we launched in 2023, we promote the attitude that fun doesn't have to be associated with alcohol consumption and can be fully enjoyed even without drinking alcohol.

This initiative is to address people who prefer a healthier lifestyle and contribute to changing the perception of soft drinks in society. With the campaign, we attend various sporting and social events, engage influencers and work to deliver on our promise to give experiences to and promote meaningful networking among people through our products.

FUN DOESN'T HAVE TO BE ASSOCIATED WITH ALCOHOL CONSUMPTION AND CAN BE FULLY ENJOYED EVEN WITHOUT DRINKING ALCOHOL.

8 %

The interest of the Czech market in flavoured non-alcoholic beers is growing, their share has doubled over the last five years and now accounts for 8 % of packaged beer sales. In Slovakia, the demand in this area has been relatively stable over recent years, with flavoured non-alcoholic beers accounting for around 13% of sales. A significant contributor to this growth is represented by new flavours, which attract customers who have not tried flavoured non-alcoholic beer before.

source: NIQ

1/2

The results of our survey show that nearly 50 % of the population have encountered social pressure making them drink. To resist this pressure, people make up socially acceptable lies in front of their friends or try to ignore their comments. Some prefer not to go out at all.

FOR THE PRODUCTION OF NON-ALCOHOLIC BIRELL BEER, SPECIALLY CULTIVATED YEASTS ARE USED WHICH HAVE A NATURALLY LOWER ABILITY TO PRODUCE ALCOHOL DURING FERMENTATION. THIS YEAST TYPE ONLY PRODUCES A MINIMAL AMOUNT OF ALCOHOL, BUT AT THE SAME TIME CREATES THE CHARACTERISTIC BEER AROMA AND TASTE. THE FERMENTATION IS CARRIED OUT AT LOWER TEMPERATURES AND UNDER STRICTLY CONTROLLED CONDITIONS TO ENSURE THAT THE ALCOHOL CONTENT REMAINS BELOW A SET LIMIT.

YEASTS HAVE TO BE WATCHED TO MAKE SURE THEY DON'T GET TOO ACTIVE.

XI

COMMUNITIES

WE CONNECT PEOPLE IN THE REGIONS WHERE OUR BREWERIES ARE LOCATED. WE SUPPORT COMMUNITY LIFE, MAINTAIN OLD TRADITIONS AND CONTRIBUTE TO THE CREATION OF NEW ONES. WE DEVELOP BEER CULTURE AND IMPROVE OUR SURROUNDINGS. WE TRAIN PUB AND RESTAURANT OWNERS TO MAKE SURE THEY HAVE THE BEST BEER POSSIBLE AND THAT THEIR BUSINESS WORKS AS IT SHOULD.

PARTNERSHIPS
FOR THE GOALS

PARTNERSHIPS WITH CITIES AND REGIONS

Plzeňský Prazdroj has long been embedded in the regions in which it operates its breweries. These partnerships include various cultural and environmental activities that the brewery organises or participates in.

As in previous years, the brewery signed a declaration of cooperation with the city of Plzen in 2023. Thus it can participate in projects such as the Festival of Freedom, Sportmania, Pilsner Fest, Plzen Day in the Senate and more. Many events were also held in the Velké Popovice region. In the spring, for example, the brewery held a celebration in honour of the brewery's founder, Baron František Ringhoffer. On this occasion visitors had an opportunity to explore the Baron Ringhoffer Landscape educational path and take part in the traditional local pork feast. The programme included the introduction of the brewery's new mascot, Rosa the Kid Goat. Further events held in Velké Popovice included two streetfood festivals and a Sausage Fest. The Radegast brewery organised the Radegast Feast and the Radegast Day. In Slovakia, the Šariš brewery participated in a cultural event at Šariš Castle and in a downtown sporting event, and supported an international sculpture symposium. Events of this type represent our continuous efforts to maintain local traditions and strengthen the community spirit in the region.

Last year we revitalized the Brewery Park in Velké Popovice. The park was pruned, some trees had to be cut down due to their age and disease and replaced with new plantings respecting the historical character of the park and the native plant species that are at home there.

In addition to trees, decorative shrubs and perennial flower beds were planted. We also built new paths to make it easier for visitors to move around. Furthermore, the old gatehouse, which no longer served its purpose, was renovated and now offers refreshments and drinks to tourists, cyclists and locals, who can now enjoy them in the beautiful landscape of the park. A new enclosure for goats was built close to the gatehouse by the brewery's coopers.

In Plzen, there is a developing project of a cycling path, which the Prazdroj brewery is building on its land and which will connect to the cycling paths of the city and the region.

PLZEŇSKÝ PRAZDROJ FUND

In 2023, Prazdroj decided to simplify its grant activities and united the public-benefit projects around its breweries - Prazdroj lidem (Prazdroj for the people), Kozel lidem (Kozel for the people), Radegast lidem (Radegast for the people) and Šariš lidem (Šariš for the people) into a new Pilsner Urquell Fund.

IN ITS FIRST YEAR OF OPERATION, THE FUND SUPPORTED PROJECTS WITH CZK 1.6 MILLION IN THE CZECH REPUBLIC AND EUR 16,000 IN SLOVAKIA.

We have strengthened our cooperation with the towns and villages around our breweries, which allows us to seek out projects that are longer-term in nature and bring significant positive change to these municipal communities. The grant committees now meet up to three times a year so they can respond more flexibly to current community needs. The fund supports a wide range of projects, from environmental initiatives via restorations of tourist attractions to community events that revitalise the public space. The decisions are made by a team of three judges, always led by the manager of the brewery in question, who knows their region well.

BREWERIES AND THEIR VISITORS

Tourists from all over the world enjoy visiting the Plzeňský Prazdroj premises in Plzeň. In 2023, the brewery was visited by approximately **530,000 tourists**, which was an increase of **13%** compared to the previous year.

Growing interest in sightseeing routes and cultural events in the brewery area, as well as in the Brewery Museum and the Pilsen Historical Underground, seen by more than **67 thousand visitors**, was recorded. Traditionally, the biggest tourist flow was directed to the Pilsner Urquell route, but the tour route of the Gambrinus brewery also saw a big increase in visitor rates.

The growing trend in 2023 was supported by the renewal of organised tourism after covid and an increased number of tourists from Asia. Nevertheless, most visitors still came from the Czech Republic, followed by Germans, Taiwanese and South Koreans. Last year's numerous groups of foreigners also included tourists from America, Italy and Poland.

The brewery also hosts various events, such as the traditional Summer at Prazdroj and food festivals. In 2024, Prazdroj plans to offer a new sightseeing tour as part of the Industry Open festival. It will allow visitors to take a glimpse into the industrial section of the brewery and get acquainted with the production technologies.

The Velké Popovice brewery recorded **125,000 visitors** last year, which is **35%** more than in 2022. The most frequent visitors were Czechs, Hungarians and Germans, while tourists from South Korea also returned after the covid hiatus. In addition to special tours showing the brewery history, visitors can also take part in the traditional Kozel Beer Days.

WE DEVELOP CZECH BEER CULTURE

Our growth, and thus the growth of our partner restaurants and pubs, has been significantly supported by our long-term cooperation with owners and operators and by our efforts to develop the Czech food service sector. We provide free of charge tapping technology to businesses, including tanks, glassware and outdoor seating equipment. We help with exterior renovations and interior transformations to make them more welcoming and to inspire guests to come back.

We also have several development programmes for different types of businesses. Our Beer Gastro Academy (BGA) is the largest and most sophisticated training program for pub and restaurant operators in the Czech Republic. This two-day programme offers training to restaurant owners and operators in areas such as economy of operation, current food service trends, digital marketing and people management. Taproom staff receive training in tapping and beer care, including communication with guests, while chefs receive training in current culinary trends, efficient food preparation and understanding food costs. In the six years of the program's existence, which includes a two-year online hiatus during the pandemic, the BGA has been held live in approximately **450 pubs and restaurants**, providing training to some **1,350 food service professionals**.

450
pubs and restaurants have been trained by our Beer Gastro Academy

BGA participants report significant improvements in their operations, including an approximately **10%** increase in beer sales, a gross profit increase of **12%** due to a change in sales mix and proper menu design, and **10%** savings in food costs due to efficient use of ingredients and properly designed menus. The program also leads to a **23%** increase in the number of social media followers, which helps build their relationship with the business and attract new customers.

THE COOPER'S CRAFT IS REGISTERED ON THE NATIONAL LIST OF INTANGIBLE ASSETS OF TRADITIONAL FOLK CULTURE.

BARRELS AND COOPERS

In the cellars of the Plzen brewery, where Pilsner Urquell matures just as it did 181 years ago, the traditional pitching of large lager barrels takes place. This process of disinfecting the wooden barrels, which have a capacity of up to 40 hectolitres and weigh 800 kg, is carried out twice a year by a team of eight coopers. The applied pitch ensures that the beer does not take on unwanted aromas and flavours from the wood. The beer kept under the historical conditions is then not only used by our brewers for regular comparisons with the beer produced in the modern facility, but also can be tasted during brewery tours.

800
kilograms is the weight of one wooden barrel

PROUD BREWERY IN MOVEMBER

In 2023, we continued our successful cooperation with the Men Against Cancer Foundation, which runs the international Movember awareness campaign in the Czech Republic. Our non-alcoholic Proo- van beer from the experimental Proud brewery was again available with a limited-edition label showing the moustache symbol of Movember. With every pint sold, we donated CZK 5 to support the prevention of prostate and testicular cancer. The total amount raised was CZK 86,828.

22
million crowns have been donated to the Paraple Center since the beginning of our cooperation with the charity

CHARITY AUCTION OF BEER-MADE DRESS

Pilsner Urquell held its traditional charity auction, which raised almost CZK 520,000 to support the Paraple Centre charity, which helps people with spinal cord injuries. The most expensive item in the auction was a dress made of beer worn by Anya Geisler at the Karlovy Vary Film Festival (sold for CZK 126,242). The funds raised were used to provide a residential social rehabilitation service and to expand it by field service. The auction was held for the twelfth year and Prazdroj contributed almost CZK 22 million to wheelchair users.

2% FOR THE NON-PROFIT SECTOR

Slovak companies can use the opportunity to support the non-profit sector with two per cent of their income tax. The largest part of the donation has traditionally gone to the Velký Šariš Community Foundation, the Prima civic association, with which we implement the Respect 18! project, and organizations dedicated to the prevention, diagnosis and therapy of FAS (fetal alcohol syndrome). Further support was received by the Hradba Šariš civic association and the fund under the Ekopolis Foundation, which focuses on adaptation measures in agricultural landscapes.

HELPING NATURE AND COMMUNITIES

In autumn 2023, we engaged in volunteer activities in the Czech Republic and Slovakia to help nature and human communities. A total of 62 Czech and 23 Slovak colleagues took part in cleaning up the natural landscape and making public spaces more beautiful. These activities included for example the Clean Up the Czech Republic and Clean Up Slovakia events. Volunteers focused on cleaning up the area around rivers and ponds, where they picked up hundreds of kilograms of waste. There was also the traditional event in Pustevny and we also helped in the social centre in Prešov and the Devínská Kobyla facility, where we helped restore biodiversity for goat breeding.

FIRST AT SOURCE

According to a survey by Plzeňský Prazdroj, one in three pubs is not sure of its continued existence. The educational portal **First at Source** is trying to help bring guests back to pubs and restaurants. This set of educational video courses offers advice on all aspects of running a pub – from beer tapping, via economics, cost savings and sustainability in operations and marketing to staff training. The program, with Zdeněk Pohlreich as its ambassador, had 2020 unique users in the Czech Republic in 2023. The program was also newly launched in Slovakia, where 341 people were trained in its first year.

SUPPORT FOR TRADITIONAL VILLAGE PUBS

According to our data, the number of village pubs has fallen by 15% in the last four years. To help, we run **the Villages programme**, which has invested nearly CZK 28 million over six years to support endangered village pubs. Pubs can use the support to improve their interior decorations and equipment, or to fund activities that will attract guests to them. Pubs are often the only meeting and social event venues in smaller rural communities and therefore their preservation is essential to local community life.

28 MILLION CROWNS

STAR FOR BREWERS

Once again, we awarded the prestigious Brewers Star award to pubs and restaurants that provide excellent beer care. Our inspectors regularly evaluate the entire process, from storage via cleanliness of the beer lines and glassware, to proper tapping techniques. In 2023, a record **748 pubs and restaurants** in the Czech Republic won this award, which is 162 more than last year. In Slovakia, **165 pubs** were awarded, 48 more than in 2022.

We strive to make quality tap beer available to as many pub and restaurant visitors as possible. And not only in cities, but also in villages. Therefore, we strive to help operators and staff, through long-term and systematic support and training programs, improve their service and thus better win over their competitors. Last year alone, we trained **the staff of 1,700 pubs and restaurants**.

The largest increase in the number of businesses awarded the Brewers Star was in towns and villages with 5 to 20,000 inhabitants, where **the number increased by 43% to a total of 144 establishments**. Almost 60 pubs were awarded in villages with up to 5,000 residents. The Brewers Star not only acknowledges excellent work of pub keepers, but also helps guests find the best pubs, giving selected establishments a significant competitive advantage.

Increase in award-winning businesses in small towns and villages

43 %

FRESH OUTLET

REDUCING VISUAL SMOG

Thanks to the Fresh Outlet programme, Plzeňský Prazdroj has helped transform the appearance of 6,000 pubs and restaurants, significantly reducing visual smog and increasing their attractiveness, since 2020. The project focuses on improving the exteriors of businesses by removing unnecessary advertising and illuminated banners, resulting in energy savings and reduced plastic consumption. The new illuminated pub designations have already saved pub operators almost 580,000 MWh of electricity over the project lifetime, which roughly equals the electricity consumed by 200 households in 12 months.

**PLZEŇSKÝ PRAZDROJ WAS
FOUNDED ONE HUNDRED AND
EIGHTY-TWO YEARS AGO THANKS
TO THE INITIATIVE OF THE PILSEN
TOWNSPEOPLE THEMSELVES. THEY
WERE NOT SATISFIED WITH THE
QUALITY OF THE LOCAL BEER AND
WERE NOT GOING TO ACCEPT IT.
SO THEY JOINED FORCES, PUT
TOGETHER THE NECESSARY FUNDS
AND FOUNDED A BREWERY THAT
LATER MADE THEIR TOWN FAMOUS
ALL OVER THE WORLD.**

WHEN PEOPLE GET TOGETHER, THEY CAN DO MORE THAN THEY CAN EVEN IMAGINE.

IT'S WORK THAT HAS TO BE DONE.

EVERY LITRE, KILOGRAM, HECTARE, KILOJOULE WE CONSUME OR PRODUCE IS TRANSPARENT.

STANDARDS

IN OUR REPORT WE REFER TO SELECTED INDICATORS OF THE INTERNATIONAL REPORTING STANDARDS OF THE GLOBAL REPORTING INITIATIVE (GRI). IN PREPARATION FOR THE NEW EUROPEAN CSRD DIRECTIVE, WE HAVE ALSO ADDED SOME INDICATORS ACCORDING TO THE ESRB STANDARDS.

GRI INDEX (CONTENT INDEX)

STATEMENT ON THE USE OF STANDARDS	Plzeňský Prazdroj reports information listed in this GRI Content Register for the period 1 January 2023 – 31 December 2023 with reference to GRI standards.
GRI STANDARD VERSION 1	GRI 1: Foundation 2021
SECTOR GRI STANDARDS	None

GRI STANDARDS	INDICATORS	INFORMATION LOCATION	NOTES
GENERAL DISCLOSURES (GRI 2)			
ORGANISATION AND REPORTING			
GRI 2-1	Organisation data	About Us, About the Report, Annual Reports CZ and SK	
GRI 2-2	Entities included in the sustainability report	About Us, About the Report	
GRI 2-3	Reporting period, reporting cycle and contact details	About this Report	1 January - 31 December 2023
GRI 2-4	Modifications to previously published information	Carbon neutrality, GRI data - Emissions	
GRI 2-5	External verification	About this Report	
ACTIVITIES AND STAFF			
GRI 2-6	Activities, value chain and other business relationships	Introduction, About Us, Behind the Gates of Breweries, Ingredients, Communities	
GRI 2-7	Staff	People, GRI data - People	2-7 b III - workers without fixed working hours are reported as other workers under GRI 2-8.
GRI 2-8	Other workers	GRI data - People	
ADMINISTRATION AND MANAGEMENT			
GRI 2-9	Structure and composition of organisation administration and management	About Us, Strategy, Annual Reports CZ and SK	
GRI 2-12	The role of the supreme administrative and management body in overseeing impact management	Strategies	
GRI 2-13	Delegated responsibility for impact management	About Us, Strategy	
GRI 2-14	The role of the supreme administrative and management body in sustainability reporting	About this Report	
GRI 2-17	Collective knowledge of the supreme administrative and management body	Strategies	
GRI 2-18a	Supreme management body performance evaluation	Strategies	

GRI STANDARDS	INDICATORS	INFORMATION LOCATION	NOTES
STRATEGIES, POLICIES AND PROCEDURES			
GRI 2-22	Sustainable Development Strategy Statement	Introduction, About Us, Strategy	
GRI 2-23	Commitments to Policies	About Us, Strategy, People, Responsibility	https://www.prazdroj.cz/nas-pribeh/dulezite-listiny
GRI 2-24	Applying Commitments to Policies	About Us, Strategy, People, Responsibility	
GRI 2-25	Processes to remedy negative impacts	About Us, Responsibility	
GRI 2-26	Mechanisms for consultation and communication of suggestions	People - Ethics, Responsibility - Commercial Communications	https://www.prazdroj.cz/nas-pribeh/dulezite-listiny
GRI 2-27	Compliance with laws and regulations	About Us	There were no breaches of legislation during the reporting period.
GRI 2-28	Membership in associations	About Us - Stakeholders	
STAKEHOLDER INVOLVEMENT			
GRI 2-29	Approach to stakeholder involvement	About Us - Stakeholders, Responsibility, Communities	
GRI 2-30	Collective Bargaining	People	The Collective Bargaining Agreement applies to all employees of Plzeňský Prazdroj, a.s. and Plzeňský Prazdroj Slovensko, a.s.
MAJOR TOPICS (GRI 3)			
GRI 3-1	The process of identifying major topics	Strategy, About us	Further analysis of topic significance will already follow the principle of double significance and ESRs standards.
GRI 3-2	List of major topics	About Us - Materiality Matrix, Strategy - Pillars of Strategy	
GRI 3-3	Management of major topics	Strategies, text of chapters	The approach to management of major topics is described in the relevant chapters of this report.
ECONOMICS			
MAJOR TOPIC: ECONOMIC PERFORMANCE (2016) (GRI 201)			
GRI 201-1	Direct economic value created and distributed	About Us, Annual Reports CZ and SK	Key financial indicators can be found in the Annual Reports.
GRI 201-3	Compulsory contributions to pension funds and other contributions to supplementary pension schemes	Annual Reports CZ and SK	
GRI 201-4	Financial support from the state	Annual Reports CZ and SK	
MAJOR TOPIC: MARKET PRESENCE (2016) (GRI 202)			
GRI 202-2	Proportion of managers recruited from local communities		For the Czech and Slovak Republics, the ratio is 75% for company management and 95% for senior management.
MAJOR TOPIC: INDIRECT ECONOMIC IMPACTS (2016) (GRI 203)			
GRI 203-1	Infrastructure investments and supported services	Ingredients, Communities	
GRI 203-2	Significant indirect economic impacts	Ingredients, Packaging, People, Communities	
MAJOR TOPIC: PURCHASING PRACTICES (2016) (GRI 204)			
GRI 204-1	Share of expenditure on local suppliers	Ingredients, Packaging	99% of packaging material suppliers are from the EU, 1 supplier is from the UK. 100% of barley and 88% of hops come from domestic suppliers in the Czech Republic and Slovakia.

GRI STANDARDS	INDICATORS	INFORMATION LOCATION	NOTES
MAJOR TOPIC: MEASURES AGAINST CORRUPTION AND ANTI-COMPETITIVE BEHAVIOUR (2016) (GRI 205, 206)			
GRI 205-1	Activities assessed for corruption-related risks	About Us - Company Ethics	https://www.prazdroj.cz/nas-pribeh/dulezite-listiny
GRI 205-2	Communication and training on anti-corruption measures	People - Ethics	
GRI 205-3	Confirmed cases of corruption and action taken		There were none.
GRI 206-1	Penalties for infringements of competition rules		There were none.
MAJOR TOPIC: TAXES (GRI 207)			
GRI 207-1	Approach to tax payment	About Us	https://www.asahigroup-holdings.com/en/company/policy/tax_code_of_conduct.html
GRI 207-4 in-house	Amounts of taxes paid	About Us, Annual Reports CZ and SK	
ENVIRONMENT			
MAJOR TOPIC: MATERIALS (2016) (GRI 301)			
GRI 301-1	Material consumption by weight or volume	Ingredients, Packaging, GRI data - Materials	
GRI 301-2 in-house	Share of packaging made from recycled materials	Packaging, GRI data - Materials	We monitor an alternative indicator - the proportion of packaging made from recycled materials - which is more relevant for beverage producers.
GRI 301-3	Take-back of products and packaging materials	Packaging	The return rate of barrels and crates is almost 100%. The return rate of glass bottles is 98%.
MAJOR TOPIC: ENERGY (2016) (GRI 302)			
GRI 302-1	Energy consumption within the organisation	Carbon Neutrality - GRI data - Energy	In addition to the summary, we also provide a breakdown by brewery and malthouse.
GRI 302-3	Energy Intensity	Carbon Neutrality - GRI data - Energy	We monitor energy consumption separately for malt and beer.
GRI 302-4	Reduction of Energy Consumption	Carbon Neutrality	
MAJOR TOPIC: WATER (2018) (GRI 303)			
GRI 303-1	Interaction with water as a shared resource	Water	
GRI 303-2	Managing impacts associated with wastewater discharges	Water, GRI data - Water	
GRI 303-3a	Water Consumption	Water, GRI data - Water	
GRI 303-4a	Wastewater Discharge	GRI data - Water	
GRI 303-5 in-house	Water consumption per product unit	Water, GRI data - Water	We report water consumption in the form of our in-house indicator in the conversion to 1 hl of beer produced and m ³ per ton of malt.
MAJOR TOPIC: BIODIVERSITY (GRI 304)			
GRI 304-1	Operations in or near protected areas and areas of high biological value		None in th region.
GRI 304-3 in-house	Protection of Biodiversity	Water, Ingredients	It is not about protection or remediation at operation sites, but a voluntary activity to protect valuable areas in the surrounding area or in our value chain.
MAJOR TOPIC: EMISSIONS (2016) (GRI 305)			
GRI 305-1	Direct greenhouse gas emissions (Scope 1)	Carbon neutrality, GRI data - Emissions	

GRI 305-2	Indirect greenhouse gas emissions from energy generation (Scope 2)	Carbon neutrality, GRI data - Emissions	
MAJOR TOPIC: WASTE (2020) (GRI 306)			
GRI 306-1	Waste and related impacts	Packaging, Waste	
GRI 306-2	Waste-related impact management	Packaging, Waste	
GRI 306-3	Waste generation	Waste, GRI data - Waste	
GRI 306-4	Waste for reuse	Waste, GRI data - Waste	
GRI 306-5	Waste for disposal	Waste, GRI data - Waste	
MAJOR TOPIC: SUPPLIER ENVIRONMENTAL ASSESSMENT (2016) (GRI 308)			
GRI 308-1	Evaluating environmental criteria for new suppliers		Since 2021, all new suppliers over €100,000 have been accredited through a Supplier Risk Assessment, which includes ESG criteria.
GRI 308-2	Negative environmental impacts in the supply chain and measures taken		There have been no emergencies or major accidents that might have adversely affected the environment.
COMPANY			
MAJOR TOPIC: EMPLOYMENT (2016) (GRI 401)			
GRI 401-1	Staff hiring and fluctuations	GRI data - People	For this indicator we report counts.
GRI 401-2	Benefits provided to full-time employees that are not provided to fixed-term or part-time employees	People	
GRI 401-3a, b, c	Parental leave	People, GRI data - People	We report a-c data on maternal and parental leave drawing, starts and returns to work. We do not calculate return and retention rates (d, e).
MAJOR TOPIC: EMPLOYEE-MANAGEMENT RELATIONS (GRI 402)			
GRI 402	Minimum time limits for notification of operational changes		The notification period is one month before the decision on the organisational change is issued. It is stated in the collective agreements. (Newly added.)
MAJOR TOPIC: OCCUPATIONAL HEALTH AND SAFETY (2018) (GRI 403)			
GRI 403 in-house	Approach to occupational health and safety	People, About Us	The requirements for describing the management approach under GRI Indicators 403-1 to 403-8 are too broad for the purpose of this report. We present our approach here in a brief form, supported by the full internal OHS documentation.
GRI 403-1	Occupational health and safety management system	People	
GRI 403-2	Hazard identification, risk assessment and incident response		
GRI 403-3	Employee health care		
GRI 403-4	Employee involvement and consultation in the OHS management and communication system		
GRI 403-5	Occupational health and safety training		
GRI 403-6	Support for employee health		
GRI 403-7	Prevention and minimisation of OHS-related impacts in business relationships		
GRI 403-8	Workers included in the OHS management system		
GRI 403-9	Occupational injuries	GRI data - People	Points c, d are addressed by the OHS management system.

GRI STANDARDS	INDICATORS	INFORMATION LOCATION	NOTES
MAJOR TOPIC: TRAINING AND EDUCATION (2016) (GRI 404)			
GRI 404-1	Average number of hours of training per employee	GRI data - People	
GRI 404-2	Programmes to improve employee skills and promote sustainable employability	People	
GRI 404-3	Percentage of employees who undergo regular performance and career development reviews		Regular annual performance and career development reviews apply to all fixed-term and permanent staff.
MAJOR TOPIC: DIVERSITY, EQUAL OPPORTUNITIES AND NON-DISCRIMINATION (2016) (GRI 405, GRI 406)			
GRI 405-1	Diversity in governing bodies and staff	People, GRI data - People, Annual Reports CZ and SK	The data reported here refer to the management - directors jointly for CZ and SK. The members of the individual statutory bodies are listed in the annual reports.
GRI 405-2	The ratio of basic pay and remuneration for women and men	People - Equal Salary Certification	Summary information without breakdown by category.
GRI 406-1	Cases of discrimination and action taken		There were none.
MAJOR TOPIC: HUMAN RIGHTS (2016) (GRI 407, GRI 408, GRI 409, GRI 410, GRI 411, GRI 412)			
Human Rights - in-house		About Us - Company Ethics, People - Ethics	
GRI 407-1	Freedom of Association and Collective Bargaining (2016)		We are committed to protecting and respecting human rights in all these areas. We require the same from our suppliers. For details, see the Business Ethics Policy at https://www.prazdroj.cz/nas-pribeh/dulezite-listiny .
GRI 408-1	Child Labour (2016)		
GRI 409-1	Forced and Compulsory Labour (2016)		
GRI 410-1	Security Practices (2016)		
GRI 411-1	Protecting the Rights of Indigenous Peoples (2016)		
GRI 412-1	Human Rights Protection Assessment (2016)		
GRI 412-2	Staff training on human rights and related regulations and procedures	People - Ethics	
MAJOR TOPIC: LOCAL COMMUNITIES (2016) (GRI 413)			
GRI 413-1	Operations involved in local communities, impact assessment and development programmes	Communities	
GRI 413-2	Operations with significant actual or potential negative impacts on local communities		We are not aware of any actual or potential negative impacts of our operations on local communities.
MAJOR TOPIC: SUPPLIER IMPACT ASSESSMENT (2016) (GRI 414)			
GRI 414-1	Evaluation of social criteria for new suppliers		Since 2021, all new suppliers over €100,000 have been accredited through a Supplier Risk Assessment, which includes ESG criteria.
MAJOR TOPIC: CUSTOMER HEALTH AND SAFETY (2016) (GRI 416)			
GRI 416-1	Assessment of product and service impact on health and safety	Responsibility	
GRI 416-2	Violations of regulations in the area of product and service impact on customer health and safety		There were none.

GRI STANDARDS	INDICATORS	INFORMATION LOCATION	NOTES
MAJOR TOPIC: PRODUCT MARKETING AND LABELLING (2016) (GRI 417)			
GRI 417-1	Information and labelling requirements for products and services	Responsibility, Communities	
GRI 417-2	Cases of infringement in the area of provision of information and labelling of products and services		There were none.
GRI 417-3	Marketing communication infringements		There were none.
MAJOR TOPIC: CUSTOMER PRIVACY (2016) (GRI 418)			
GRI 418-1	Legitimate complaints about customer privacy breaches and personal data leaks		There were none.

ESRS INDEX

"This overview provides for orientation in the report in terms of the ESRS standard structure. It does not represent the full scope of the ESRS content register. It indicates the location of information related to disclosure requirements (rather than the individual data points) without guaranteeing full coverage of those requirements. We are gradually preparing for reporting under the ESRS requirements, this report is prepared with reference to the GRI standards and does not yet include all information that will be required from us by the ESRS standards in the future."

STANDARD	ESRS STANDARD AND THE DISCLOSURE REQUIREMENT NAME	COVER-AGE	INFORMATION LOCATION	NOTES
	ESRS 2 GENERAL REQUIREMENTS			
	BASIS FOR THE SUSTAINABILITY STATEMENT			
ESRS 2	BP-1 - General basis for preparation of the sustainability statement		About this Report

Women	18.3	20.5	19.6	30.2	16.1
Men	18.9	31.3	37.8	29.1	16.2

MANAGEMENT CZ/SK	2022	2023
TOTAL	11.6	10.6
Women	10.25	9.2
Men	15.5	11.0

All data are calculated as cumulative staff numbers (1 January - 31 December of the given year).
This rate was calculated based on the number of training hours and the number of workers in the given category.
The differences in hours are mainly due to the form of training in the covid and postcovid periods.
Data for management are not available for previous years in this breakdown.

More information in the [People](#) chapter.

PEOPLE 403-9 OCCUPATIONAL INJURIES

	SK	0	0	0	0	0.000	0.000	0.000	0.000
Main types of occupational injuries		finger injuries, leg and arm injuries, bruises		fractured arms, leg injuries					
Number of hours worked	CZ	1783402	1307637	1409213	1,450,713				
	SK	325700	276035	732219	263,133				

Rate calculated on the basis of 200,000 hours worked for the equivalent of 100 workers. The data were obtained from internal HR and HSE systems. The data include all staff over whose activities the organisation controls.

* SPECIALISED CONTRACTORS

¹ Contractors employed for specific tasks that do not take up a substantial part of their working time and/or who work for multiple employers (such as annual testing or equipment maintenance).

² Contractors engaged for specific projects/maintenance that are not part of normal operations (such as workers involved in a construction project).

GLASS Bottles	67 %	69 %	71 %	CZ = 70 % SK = 70 %	CZ = 65 % SK = 65 %

In previous years, the internal system did not allow us to track data split between CZ/SK. For more information, see the [Packaging](#) chapter.

WASTE 306-3

WASTE FROM PRODUCTION SITES

Exclusive of waste from distribution centres, administrative centres and technical services, which account for 0.15% by volume.

TONS		2019	2020	2021	2022	2023
BY-PRODUCTS (spent grains, yeast, wash-offs, malt flower, malt dust, back barley, etc.)	CZ	160697	164460	159970	172778	172,254
	SK	14305	18990	18393	19667	18,291
WASTE (diacetamous earth, barley dust, glass packaging, aluminium packaging, paper packaging, plastic packaging, wooden packaging, mixed packaging, labels, iron and other metals, biodegradable waste, mixed municipal waste, discarded electrical equipment, sludge, construction debris, etc.)	CZ	11927	11901	10821	11016	11,098
	SK	1116	1018	773	994	993
HAZARDOUS WASTE (chemical substance and mixture packaging, absorbents, engine and mineral oils, oil filters, laboratory chemicals, fluorescent lamps, solvents, discarded equipment containing chlorofluorocarbons, etc.)	CZ	127	144	99	72	26
	SK	65	10	3	3	3
TOTAL		188,237	196,523	190,059	204,533	202,665
	CZ	172,751	176,505	170,890	183,866	183,378
	SK	15,486	20,018	19,169	20,667	19,287

WASTE 306-4, 306-5

WASTE TREATMENT (EXCLUDING BY-PRODUCTS)

100% of by-products are recycled.

TONS		2019	2020	2021	2022	2023
TOTAL WASTE EXCLUDING BY-PRODUCTS	CZ	12054	12045	10920	11088	11,124
	SK	1181	1028	776	997	994

TONS		2019	2020	2021	2022	2023
RECYCLING diatomaceous earth, bitter sludge, barley dust, glass, paper and cardboard, plastics, metals, biodegradable waste, hazardous waste (oils, batteries, electrical equipment), etc.	CZ	information is not available in this breakdown	5621	8081	10029	9,999
	SK	information is not available in this breakdown	750	655	927	965
ENERGY RECOVERY wooden packaging, mixed packaging, mixed municipal waste, hazardous waste (chemical substance and mixture packaging, absorbents), etc.	CZ	information is not available in this breakdown	4142	1381	347	748
	SK	information is not available in this breakdown	182	62	27	29
LANDFILL mixed municipal waste, mixed packaging, screen wash-offs, bulky waste, etc.	CZ	2413	2282	1458	713	376
	SK	199	96	59	44	0

The proportion of hazardous waste is negligible, therefore we consider this simplified presentation to be sufficiently clear also for the purposes of GRI 306-4 and 5b, c.

Waste management according to types and subsequent disposal is provided by contractual companies that hold valid permits and authorizations for waste disposal in the area of waste management according to valid legislation. For more information, see the [Waste](#) chapter.

GRI DATA - ENERGY - WATER - EMISSIONS

DATA ON WATER, ENERGY, EMISSIONS REFER TO THE PRODUCTION SITES.

Further consumption is measured at company-owned distribution centres, but this accounts for only 0.4% of the total consumption.

The Proud mini brewery (on Plzeň premises) is an insignificant source of consumption in terms of performance and energy consumption.

WASTEWATER TREATMENT

PLZEŇ - wastewater to municipal treatment plant, pH neutralization.

NOŠOVICE - wastewater is pre-treated in the brewery's anaerobic system, then it goes to the municipal treatment plant.

VELKÉ POPOVICE - wastewater is completely treated by the brewery in the brewery's wastewater treatment plant.

VELKÝ ŠARIŠ - wastewater to the municipal wastewater treatment plant without pre-treatment.

For more information, see the [Water](#) chapter.

EMISSIONS 305-1, 305-2

We follow the GHG protocol for measurement.

We use the National Inventory Report (NIR) https://www.mzp.cz/cz/vypoctove_factory_emise as the source of emission factors.

The emission factor for electricity and purchased cooling was received from suppliers.

Independent Limited Assurance Report

To the Board of Directors of Plzeňský Prazdroj, a. s.

We have undertaken a limited assurance engagement on the selected sustainability information of Plzeňský Prazdroj, a.s. („the Company“), listed below under the ‚Scope and Subject Matter‘ section in the Company’s Sustainability Report that covers the twelve-month period from 1 January to 31 December 2023 („the Report“).

Scope and Subject Matter

Our limited assurance engagement focused on the 2023 sustainability indicators as presented in the 2021 GRI Content Index of the Report on pages 174 to 179 and on the rest of the information in the Report.

Criteria

The applicable criteria defined by the Company and used to prepare the Report consist of internal group methodology based on Asahi Group Sustainability Principles and on the GRI Sustainability Reporting Standards published by the Global Reporting Initiative (“the Applicable Criteria”).

Inherent Limitations

The absence of a significant body of established practice on which to draw to evaluate and measure non-financial information allows for different, but acceptable, measures and measurement techniques. In addition, GHG quantification is subject to inherent uncertainty because of incomplete scientific knowledge used to determine emission factors.

The Company’s Responsibility

The Company is responsible for the selection of the Applicable Criteria and for the preparation and presentation of the Selected Information based on the Applicable Criteria. This responsibility includes the design, implementation, and maintenance of internal controls relevant to the preparation of the information contained in the Report that are free from material misstatement, whether due to fraud or error.

Our Responsibility

Our responsibility is to express a conclusion on the Report content and on the 2023 sustainability indicators as presented in the 2023 GRI Content Index of the Report based on the procedures we have performed and the evidence we have obtained. We conducted our limited assurance engagement in accordance with the International Standard on Assurance Engagements 3000 (Revised) “Assurance Engagements Other than Audits or Reviews of Historical Financial Information” issued by the International Auditing and Assurance Standards Board. This standard requires that we plan and perform this engagement to obtain limited assurance about on whether anything has come to our attention that causes us to believe that the Report content and the 2023 sustainability indicators as presented in the 2023 GRI Content Index are not free from material misstatement evaluated against the Applicable Criteria.

A limited assurance engagement undertaken in accordance with ISAE 3000 (revised) involves assessing the suitability in the circumstances of the Company’s use of applicable Criteria as the basis for the preparation of the 2023 sustainability indicators and report content, assessing the risks of material misstatement of these sustainability indicators and report content whether due to fraud or error, responding to the assessed risks as necessary in the circumstances, and evaluating the overall presentation of sustainability information. A limited assurance engagement is substantially less in scope than a reasonable assurance engagement in relation to both the risk assessment procedures, including an understanding of internal control, and the procedures performed in response to the assessed risks. The procedures selected depend on the assurance practitioner’s judgement.

Independence and Quality Control

We have complied with the independence and other ethical requirements of the International Code of Ethics for Professional Accountants (including International Independence Standards) issued by the International Ethics Standards Board for Accountants (IESBA Code), which is founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality, and professional behaviour.

Our firm applies the International Standard on Quality Control 1 and accordingly maintains a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards, and applicable legal and regulatory requirements.

Summary of Work Performed

Our limited assurance procedures included, amongst others, the following:

- Assessment of the suitability of the Applicable Criteria in terms of their relevance, comprehensiveness, reliability, neutrality and understandability and their consistent application.
- Inquiries of Company’s representatives responsible for collecting, consolidating, and calculating the selected information to assess the process of preparing the data, the reporting system, the data capture, and compilation methods as well as internal controls to the extent relevant for the limited assurance engagement.

- Inspection of the relevant documentation of the systems and processes for compiling, analysing, and aggregating data and testing such documentation on a sample basis.
- Analytical procedures and inspection of documents on a sample basis with respect to the compilation and reporting of quantitative data: at the level of Company, analytical procedures to verify the correct consolidation of the collected data as well as the consistency of their evolution, contribution of selected entities to the consolidated indicators, interviews to verify the correct application of the procedures and detailed tests, consisting of checking the correct application of the definitions and procedures and reconciling the data with the supporting documents.
- Critical review of the statements regarding plausibility and consistency of the Selected Information with the other information in the strategic documents.

We have not carried out any work on data other than outlined in the Scope and Subject Matter section as defined above. We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our conclusion.

Conclusion

Based on our limited procedures we have performed, nothing has come to our attention that causes us to believe that the Company’s Report for the twelve-month period from 1 January 2023 to 31 December 2023 is not prepared, in all material respects, in accordance with the Applicable Criteria.

Restriction on Use and Distribution

Our report has been prepared for and only for the Board of Directors of the Company and for no other purpose. We do not assume responsibility towards or accept liability to any other person for the content of this report.
